

RICARDO OLIVEIRA

In 2000, after graduating from University of Minho in Systems Engineering (and working as a systems administrator in the local Informatics Center), Ricardo participated in the creation of Eurotux – Informatica, one of the first spinoffs from a Portuguese University. During the (almost) 10 following years, he worked as the CTO, creating the logics behind the company's main activity – infrastructure management, as well as developing enterprise-ready solutions based mainly on open-source software.

At the same time, he developed the security policies and procedures on all the services provided by Eurotux, being a guest speaker in several international security conferences while collaborating in projects such as the Electronic Portuguese Passport and the Portuguese Citizen's Card.
