The assumptions included in the benchmark are the following:

- 1) The benchmark includes fixed-to-mobile termination charges.
- 2) In order to obtain a homogenous comparison a 3 minute average call duration has been used; set-up charges were accounted for by the standard formula.

- 3) Traffic data (voice calls and number of minutes) and peak/off peak ratio is missing for some countries. For those countries that did not communicate a peak/off peak ratio, a value of 1 (50/50) for this ratio has been taken. For peak, off-peak and weekend traffic, the assumption has been 50%-25%-25%.
- 4) Average MT Tariffs per country have been obtained by adding each operator's average MT tariff multiplied by its market share, measured in terms of subscribers (bearing in mind that 'subscribers' may be defined differently).
- 5) The MT charges are those applicable on the 31 January 2004.
