ANACOM AUTORIDADE NACIONAL DE COMUNICAÇÕES

NATIONAL TABLE
OF
FREQUENCY ALLOCATION

2010/2011 Edition

TABLE OF CONTENTS

1. INTRODUCTION

ICP-ANACOM (ANACOM) is the National Regulatory Authority for electronic communications according to the Law of Electronic Communications (LCE), Law number 5/2004, of February 10th.

One of the competences of ANACOM, within the scope of LCE, is to assure the planning, management and control of the radio spectrum, in the framework of its effective and efficient usage. For that purpose, and as a support activity developed in this scope, ANACOM maintains - periodically prepares and updates - the National Table of Frequency Allocation (NTFA)[1], an essential instrument for the spectrum management that gathers fundamental elements for the good fulfilment of the management and frequency planning activities.

In fact, according to article 15 of LCE, ANACOM, within the scope of the spectrum management, is in charge of planning the frequencies according to the following criteria:

a) Availability of the radio spectrum;
b) Assurance of effective competition in the relevant markets;
c) Effective and efficient use of the frequencies;

ANACOM is also competent to proceed with the allocation and consignment of frequencies, which obey to objective, transparent, non-discriminating and proportional criteria, and also promote the harmonisation of the use of frequencies in the European Union so as to assure its effective and efficient usage within the scope of Decision number 676/2002/EC[2] (article 15, numbers 3 and 4 of LCE).

The entities that wish to offer networks or services of electronic communications[3] accessible to the public which involve the usage of the radio

[1] Available to the public in the ANACOM site in http://www.anacom.pt/render.jsp?categoryId=291355 .
[2] Decision of the European Parliament and Council, from March 7th, 2002, regarding a regulatory framework for the policy of radio spectrum in the European Community (radio spectrum decision)
[3] "*Electronic communications network:* the broadcast systems and, if applicable, the switching or routing equipments and others resources that allow sending signals by cable, radio, optical means, or other electromagnetic means, including satellite networks, fixed terrestrial (with circuit or packet switches, including the Internet) and mobile networks, electricity cable systems, if they are used to broadcast signals, networks used for the broadcast of sound and television, and the networks used for cable television, regardless of the type of information broadcast."

spectrum are obliged to send previously to ANACOM a brief description of the network or service offer that they wish to start and to communicate the predicted date for the start of the activity, without prejudice of other elements demanded by the regulator. The procedures for starting the network and services of electronic communications offer are available on the ANACOM site[4].

The offer of networks or services of electronic communications, not accessible to the public, which operate in frequency bands subject to radio licensing, depends only of the corresponding licensing request, for network or station, according to Decree-Law number 151-A/2000, from July 20th, changed by Decree-Law number 264/2009, from September 28th.

The legal regime applicable to the use of amateur and amateur satellite stations is in Decree-Law number 53/2009, from March 2nd.

2. FRAMEWORK OF NTFA

In the terms of article 16 of LCE, ANACOM must publish the NTFA annually, which must contain:

a) The frequency bands and the number of channels already allocated to the companies of electronic communications accessible to the public, including the date when the allocation was reviewed;

b) The frequency bands reserved and to be made available in the following year within the scope of networks and services of electronic communications, accessible and not accessible to the public, specifying the cases in which the usage rights are required, as well as the corresponding allocation process;

c) The frequencies whose rights of usage are susceptible to broadcast in the terms of article 37 of LCE.

"*Electronic communications service:* the service generally offered against payment, which consists totally or mainly in the sending of signals through electronic communications networks, including the telecommunication services and the broadcast services of networks used for broadcasting, without prejudice to the exclusion mentioned in item b) of number 1 of article 2 of LCE."

[4]Accessible in http://www.anacom.pt/render.jsp?categoryId=115580 .

The frequencies allocated to the Armed Forces and the security forces and services are excluded from this publication.

The radio spectrum is divided into frequency bands, which extend from 9 kHz to 3000 GHz, and are allocated to different radiocommunications services (e.g., fixed, mobile, broadcast, radiolocation, radionavigation, amateur, radioastronomy, etc.). Within the scope of the spectrum planning, and given its scarcity, one tries that the frequencies, as much as possible, are shared by different radiocommunications services, as long as there are no harmful interferences.

Within a certain radiocommunications service (e.g., fixed service – microwave links) specific channels may also be defined. This is a new subdivision of the bands in channels with a well defined width, which can take up the entire corresponding band or only a small part. The channels aim at ordering the usages of the radio spectrum in order to minimize prejudicial interferences between operators / users in neighbouring countries and to allow economies of scale to the sector.

In this context, Portugal adopts harmonized channels at European level, in the scope of the spectrum planning works in the Conference of European Postal and Telecommunications (CEPT), or at world level, resulting from the harmonization done within the International Telecommunication Union, Radiocommunications Sector (ITU-R).

In order to identify the radiocommunications services applicable to Portugal, according to the Radiocommunications Regulation (RR) of ITU-R, in Annex 1 of NTFA, the Table of Frequency Allocation is displayed, which also reflects the main national applications (main services and/or systems authorized in Portugal).

The RR, international treaty signed by Portugal, results from agreements signed among the Member-States of ITU within the scope of the World Radiocommunications Conferences (WRC), which take place every 3 or 4 years, and must be complied with by the countries in this organization.

Additionally to the revision of RR, the WRC establish guidelines, at technical and regulatory levels, for the usage of the radio spectrum. The last WRC was

in Geneva, from October 22nd to November 16th, 2007[5]. National works are under way to prepare the next WRC (http://www.anacom.pt/render.jsp?contentId=1041099), which will take place in 2012.

The usages of spectrum are based on the publication of the usages and reservations of frequency bands established, for each year, by the NTFA (Annexes 2 and 3, correspondingly), within the scope of the networks and services of electronic communications, accessible and not accessible to the public.

The NTFA specifies the cases in which usage rights are required, as well as if their allocation arises from the full accessibility regime or if it involves a selection procedure by competition or comparison, namely auction or tender. The respective procedures follow the specific courses, according to articles 31 and 35 of LCE.

The usage rights in NTFA are transferable according to the regime foreseen in article 37 of LCE. In the scope of the transfer of frequency usage rights, ANACOM, considering it to be important to define relevant rules and conditions associated with secondary spectrum trading, thought that such rules should reflect the legal changes arising from the transposition of the new European regulatory framework (revision of 2006), which should be concluded during 2011.

It should also be said that, according article 31 of LCE, ANACOM can adopt and publish decisions for the limitation o allocation of usage rights, which however must be duly justified and take into consideration the need to maximize the benefits for the users and facilitate the development of competition.

NTFA also includes the indication of the usages of frequencies exempt from radio licensing (Annex 4), for which ANACOM does not require any previous act.

It should be noted that, as seen in the section of NTFA regarding the reservations of frequency bands established for each year (Annex 3), the

[5]The main conclusions of the conference can be seen in http://www.anacom.pt/render.jsp?contentId=544056 .

process of allocation of the available spectrum is, in general, of complete accessibility (e.g. Fixed Service applications). This allows, in the frequency bands in which demand does not exceed the available radio spectrum, for a faster access to the users of this resource, thus contributing to maximize the benefits for the consumers, promoting competition and the development of the market.

Considering that the approval of NTFA constitutes a measure with a significant impact on the relevant market, this is preceded by the general consultation procedure foreseen in article 8 of LCE. Then, a new version of NTFA is published, so as to allow that the version in effect keeps updated, without prejudice of, at any time, changes being made to the elements in this document, which are duly justified.

Thus, NTFA, a fundamental instrument in the spectrum management is, according opt the law, simultaneously stable, in order to assure the security of those intervening in the market, and has the capacity to adapt.

However, the balance must be assured between the stability desired for NTFA and the necessary changes so that it adequately reflects the purposes defined by Law, in particular, due to the need to promote the harmonization of the usage of frequencies (number 4 of article 15 of LCE) and the assurance of effective conditions for competition in the relevant markets and the effective and efficient usage of the frequencies (see items b) and c) of number 2 of article 15 of LCE).

3. STRUCTURE OF NTFA

NTFA is structured in seven parts:

- The first part (Annex 1), called "Table of frequency allocation", has a detailed presentation of the subdivisions of the radio spectrum, for frequencies between 9 kHz and 275 GHz, discriminating the radiocommunications services for each frequency band, according to the allocations of the RR of the ITU-R applicable to Portugal, indicating the used and planned services and systems;

- The second part (Annex 2) "Publication of the usages of frequency bands" contains the frequency bands and the number of channels used for operation of the networks and services of electronic communication accessible to the public until May 31st 2011;
- The third part (Annex 3) "Reservations of frequency bands" indicates the frequencies reserved and to be made available in 2011, for the operation of networks and services of electronic communications (i) accessible to the public and (ii) not accessible to the public;
- The fourth part of NTFA (Annex 4) "Usages exempt from licensing" has the usages of spectrum exempt from radio licensing, divided into (i) Exemption from network license and (ii) Exemption from station license;
- The fifth part of NTFA (Annex 5) "Equipments / Systems that use ultra wide band technology, UWB" has details of the generic Ultra Wide Band (UWB) equipments the specific UWB equipments;
- The sixth part of NTFA (Annex 6) "Usage of frequencies by amateur services and amateur satellite" contains the frequency bands and terms of usage (maximum allowed powers) by the different categories of amateurs, in addition to the status of amateur and amateur satellite;
- The seventh part of NTFA (Annex 7) "Appendixes" includes a set of additional elements (e.g., definitions, acronyms, relevant documents, figures).

4. MAIN ACTIONS DEVELOPED IN 2010 IN THE DOMAIN OF MANAGEMENT AND PLANNING THE RADIO SPECTRUM

Within the scope of the actions regarding the management and planning of the radio spectrum, the following activities developed in 2010 stand out:

- NTFA and Frequencies Portal

The public consultation that the National Table of Frequency Allocation (NTFA), 2009/2010 edition, was submitted to, ended on January 28th, 2010, and the analysis report (http://www.anacom.pt/render.jsp?contentId=1001855) and the reviewed NTFA were approved by deliberation on March 31st, 2010.

In order to implement a portal with information about frequencies, which will allow to easily and interactively view and search information in the scope of the frequency plan, allocations and national usages of the spectrum, in 2009 the requirements were identified and the specifications were defined for the development of a software solution called e-QNAF – National frequencies portal. This tool is currently being developed and it is foreseen that it will be available on the Anacom site soon.

The framework for e-QNAF is the adoption of Decision ECC/DEC/(01)03 (Decision EFIS), which establishes a database that includes the national tables of frequency allocation of the member states of CEPT, which is available for consultation in http://www.efis.dk/. EFIS allows viewing usages of the radio spectrum by country and allows comparing between countries, so as to verify the differences in spectrum allocation in Europe. It should be noted that EFIS is also the frequency portal selected by the Community, according to the Decision of the Commission 2007/344/EC, from May 16th, 2007.

The e-QNAF will allow the automatic export of data contained in the NTFA in order to keep EFIS updated.

- Digital Terrestrial Television

ICP-ANACOM decided, by deliberation on July 12th, 2010, to revoke the act of allocation of frequency usage rights associated with *Multiplexers* B to F and, consequently, the five titles that consubstantiate the usage rights allocated to PT Comunicações, without loss of bond. It was also determined that the revocation decision has retroactive effects since January 29th, 2010, when the corresponding decision project was approved.

In this scope, it should also be noted that, by deliberation on June 24th, 2010 the BM of ICP-ANACOM and in compliance with number 2 of the Resolution of Council of Ministers number 26/2009, published on March 17th, the final decision regarding the detailed plan for the termination of terrestrial analogical broadcast (plan for *switch-off*) associated with the introduction of terrestrial digital television (DTT) in Portugal, was approved.

The approved plan includes three stages scheduled as follows:

1st Stage - January 12th, 2012, for the transmitters and transposers that assure the coverage of the seashore of the continental territory;

2nd Stage - March 22nd, 2012, for the transmitters and transposers that assure the coverage in the Autonomous Regions of Azores and Madeira;

3rd Stage - April 26th, 2012, for the transmitters and transposers that assure the coverage in the remaining continental territory;

The present version of NTFA was updated regarding updates as a consequence of the actions summed up above.

- Digital Dividend, Sub-band 790-862 MHz

As a sequence of the public consultation started by ICP-ANACOM in 2009 and concerning the subsequent developments in the matter, namely at European level, and with the need to make decisions on this issue, Anacom submitted in September 2010 to public consultation, a decision project in order to (i) designate and make available the sub-band 790-862 MHz for electronic communication services, in accordance with Decision 2010/267/EU and proceed to the corresponding change in the National Table of Frequency Allocation, and (ii) make available the said sub-band before 2015, depending on the definition of technical and geographical conditions, that aim at the compatibility, namely with the usages in Spain and Morocco.

By deliberation of December 16th, 2010, the BM of ICP-ANACOM decided to keep the sense of the decision project, designating and making available the sub-band 790-862 MHz for electronic communication services in NTFA.

It should also be noted that ANACOM decided, by deliberation on March 9th and April 4th, 2011, to proceed with the change of some operating channels of Multiplexer A (Mux A) of the digital terrestrial television (DTT) broadcast service, consigned to PT Comunicações (PTC). Hence, the radio channels 61 (790-798 MHz), 64 (814-822 MHz) and 67 (838-846 MHz), consigned to PTC, were substituted by channel 56 (750-758 MHz) for the continental territory, by channel 54 (734-742 MHz) for the Autonomous Region of Madeira and by channels 48 (686-694 MHz), 49 (694-702 MHz) and 55 (742-750 MHz) for the Autonomous Region of Azores.

- 2.6 GHz and potential aggregation of spectrum

In 2009, ANACOM conducted a public consultation about the allocation of usage rights in the frequency bands 2500-2690 MHz (also known as the 2.6 GHz band). The replies received showed a wide interest at national level in the 2.6 GHz band (http://www.anacom.pt/render.jsp?contentId=776018), and therefore, during 2010, ICP-ANACOM analysed several factors regarding the consignment of the band, namely the conjugation with other bands (450 MHz; 790-862 MHz; e-GSM; 1800 MHz; 2,1 GHz; 3,6 GHz), the potential allocation models and obligations associated with the usage rights so as to prepare the start of the allocation process in 2011.

- *Refarming* of the GSM 900/1800 spectrum and consequent reformulation of the SMT operator titles

In the context of *refarming* of the radio spectrum in the frequency bands of 900 MHz and 1800 MHz, it was approved by deliberation in July 8th, 2010 of the Board of Management of ICP-ANACOM, to unify in a single title per operator[6], of the conditions applicable to the exercise of usage rights of frequencies allocated to Optimus, TMN and Vodafone Portugal for providing land mobile service in the listed bands. Simultaneously, the report for the previous hearing and public consultation, which the corresponding probable direction of decision, was approved.

In the scope of refarming the GSM 900/1800 spectrum, the restriction of using GSM technology in the spectrum at stake was eliminated from NTFA.

- BWA Auction

Following the approval of Regulation number 427/2009, for the Allocation of Frequency Usage Rights for the Broadband Access Via Radio (BWA), in 2010, the different stages of the procedure of selection by auction took place. The only round of bidding in the distribution stage took place during February 2010, in which two of the three participating entities were considered winners. In the consignment stage, the selection of lots in the geographical zones 1, 2, 3, 4, 5, 6, 7 and 8 was done, after which the corresponding Usage Rights were assigned to the winning bidders[7].

[6] Available in http://www.anacom.pt/render.jsp?categoryId=287162.
[7] Available in http://www.anacom.pt/render.jsp?categoryId=337551.

Following the BWA auction, the allocated spectrum as well as the entities holding the frequency usage rights are included in Annex 2 - usages.

- BFWA in 5.8 GHz

The *Broadband Fixed Wireless Access* (BFWA) was introduced in the section of Reservations in NTFA 2009/2010 in the frequency band 5725 – 5875 MHz, based on the results of studies conducted in CEPT, reflected on the CEPT Report 015 (reply from CEPT to the mandate of the European Commission on BWA). The CEPT Report 015 identifies problems with the Fixed Satellite Service, considering that the said frequency band can only be opened to BWA operations limited to the fixed and nomadic modes (BFWA).

During 2010, the analysis of opening the band for BFWA applications continued, based on new studies in CEPT and in the results of the discussions at the level of the European Commission. After the technical tests were conducted (namely taking into account the need to protect the usage of frequencies from weather radar systems), this band will be available for BFWA operations, and the allocation of Frequency Usage Rights is no required, and is only subject to prior registration of the stations.

- MCV

Following the adoption by the European Commission of Decision 2010/166/UE, from March 19th, 2010, and Recommendation 2010/167/EU, from March 19th, 2010, about the harmonization of usage conditions of the spectrum for mobile communications on board vessels (MCV services) in the European Union and about the authorization of systems for mobile communications services on board vessels (MCV service), respectively, ICP-ANACOM deliberated on 01.07.2010 to start, according to article 8 of Law number 5/2004, from February 10th, a public consultation about the introduction of mobile communication services on board vessels (MCV), so as to listen to those interested in the matter, and to proceed with the necessary changes to the National Table of Frequency Allocation and consequent update of the NTFA.

Hence, considering the replies received for the consultation, ANACOM approved, by deliberation on January 6th, 2011, the final decision about the offer of mobile communication services on board vessels (MCV).

- SST and the new regulatory framework from EU

ANACOM has announced in the recent past that it was considering the start of a public consultation regarding the secondary spectrum trading (SST), which promoted a multidisciplinary debate of the matter and allowed to determine a set of guidelines for the market. However, considering the ongoing transposition process of the new European regulatory framework (revision from 2006), the regulator thought that the debate about SST must take into account the impact of law changes, so this debate will take place in line with the timings foreseen for the revision of the regulatory framework.

This way, the present NTFA does not have any changes regarding the question of transferability of the frequency usage rights.

5. CHANGES TO THE PRESENT VERSION

NTFA was updated so as to reflect the current usages (dated May 31st, 2011) and the availability of spectrum for 2011, in the following way:

a) Update of the allocation table (**Annex 1**), so as to include new Decisions ECC and EC;

b) Update of the frequency band usages, referring to May 31st, 2011 (**Annex 2**);

c) Update of the available spectrum destined to networks and services of electronic communications, accessible and not accessible to the public, as stated in **Annex 3**;

d) Change to the annex of equipments exempt of license (**Annex 4**);

e) Update of the annex regarding UWB equipment (**Annex 5**);

f) Several updates (e.g., references to Decisions / Recommendations from EC and CEPT, detected lapses, etc.).

6. ADDITIONAL CLARIFICATIONS

Any request for additional clarification regarding the information contained in this publication must be sent to the following e-mail address: esclarecimentos.qnaf@anacom.pt.

Annex 1

TABLE OF FREQUENCY ALLOCATION

1.1Table of frequency allocation

The structure of the "Table of Frequency Allocation" is as follows:

Column 1:FREQUENCY BANDS

Indicates the frequency bands that each line on the table refers to.

Column 2:ALLOCATIONS OF RR (article 5) APPLICABLE TO PORTUGAL

Contains for each frequency band:

- Allocations of article 5 of RR applicable to Portugal;
- Notes of article 5 of RR applicable to Portugal.

The allocations highlighted with upper-case letters correspond to primary status allocations; the allocations with secondary status are written in lower-case.

The footnotes of RR (5.xxx) indicated in front of a certain service only regard to it; when footnotes are isolated in the cell, they do not refer to any of the specified services.

Column 3:MAIN NATIONAL APPLICATIONS

Main services / systems authorized in Portugal (in ***'bold'*** if they have usages). When a technology is referred, it reflects the current usage of the band, although it is not implied that the band is limited to the specified technology.

Column 4:NOTES

Used plans;

Relevant national and international standards;

Usage limitations of the bands;

Other pertinent information.

The definitions regarding the presented services, the acronyms and relevant documents referred can be found in Annex 7.

275 - 1000	(Not allocated) 5.565		

Annex 2

PUBLICATION OF FREQUENCY BAND USAGE

2.1 Frequency bands and the number of channels used for operation of the networks and services of electronic communication accessible to the public until May 31st, 2011

The terms and abbreviations used have the following meaning:

Entity, i.e. companies that offer networks and services of electronic communications accessible to the public;

Usage rights: identification of the need to allocate usage rights, according to article 16, of LCE;

Date of review of allocation: final date of the concession contract or of the frequency usage rights;

Shared usage: usage of a channel/frequency by more than one entity;

Exclusive usage: usage of a channel/frequency by a single entity;

Usage basis:

n - national basis: usage of a channel/frequency at national territory level;
g - geographic limit: usage of a channel/frequency in a certain and well defined area, by radiocommunications stations, such as, fixed stations, broadcast stations and earth stations.

Annex 3

RESERVATIONS OF FREQUENCY BANDS

3.1Reserved frequency bands and to be made available in 2011/2012 for operation of the networks and services of electronic accessible to the public

The terms and abbreviations used have the following meaning:

Need for Usage right: identification of the need to allocate usage rights, according to article 16, of LCE;

Shared usage: usage of a channel/frequency by more than one entity;

Exclusive usage: usage of a channel/frequency by a single entity;

Usage basis:
n - national basis: usage of a channel/frequency at national territory level;
g - geographic limit: usage of a channel/frequency in a certain and well defined area, by radiocommunications stations, such as, fixed stations, broadcast stations and earth stations;

Allocation process: full accessibility or selection method by competition or comparison.

40.5 -43.5 GHz ERC/DEC/(99)15 ECC/REC/(01)04	YES		g	To be defined

AUDIO BROADCAST SERVICE (RAD) VHF (Very High Frequency)				
Frequency bands	**Required usage rights**	**Number of channels (1)**	**Usage basis**	**Allocation process**
87.5 – 108.0 MHz	YES	203	g	(3)

AUDIO BROADCAST SERVICE (RAD) MF (Medium Frequency)				
Frequency bands	**Required usage rights**	**Number of channels (1)**	**Usage basis**	**Allocation process**
526.5 – 1606.5 kHz	YES	120	g	(3)

TERRESTRIAL DIGITAL AUDIO BROADCAST SERVICE Terrestrial Digital Audio Broadcasting (T-DAB)				
Frequency bands	**Required usage rights**	**Number of channels (4)**	**Usage basis**	**Allocation process**
219 - 230 MHz	YES	5	g	To be defined

TELEVISION BROADCAST SERVICE - ANALOGICAL (RDTV)				
Frequency bands	**Required usage rights**	**Number of channels (1)**	**Usage basis**	**Allocation process**
174 – 209 MHz	YES	5	g	(5)
470 – 790 MHz	YES	40	g	(5)

(1) Shared usage channels.
(2) Dynamic band management.
(3) According to Law number 54/2010, of December 24th.
(4) Exclusive usage channels.
(5) In order to supplement the coverage of the existing operators.

MOBILE SERVICE WITH SHARED RESOURCES				
Frequency bands	**Required usage rights**	**Number of channels** (1)	**Usage basis**	**Allocation process**
410 - 430 MHz	YES	60	g	To be defined

MOBILE COMMUNICATIONS ON BOARD AIRCRAFTS (MCA) (1) (2)				
Frequency bands	**Required usage rights**	**Number of channels** (3)	**Usage basis**	**Allocation process**
1710 - 1785 MHz 1805 - 1880 MHz	NO	374	n	Full accessibility

MOBILE COMMUNICATIONS ON BOARD VESSELS (MCV) (4) (5)				
Frequency bands	**Required usage rights**	**Number of channels** (3)	**Usage basis**	**Allocation process**
890 - 915 MHz 935 – 960 MHz	NO	124	n	Full accessibility
1710 - 1785 MHz 1805 - 1880 MHz	NO	374	n	Full accessibility

(1) Exclusive usage channels.
(1) It is mandatory to comply with all the technical conditions specified in the Decision of Commission 2008/294/EC, of April 7th, 2008.
(2) Networks exempt from licensing, without prejudice to the compliance of the requirements foreseen in Determination number of the BM of ICP-ANACOM, of 13/8/2008, regarding the introduction of mobile communication services on board aircrafts (MCA).
(3) Exclusive usage channels.
(4) It is mandatory to comply with all the technical conditions specified in the Decision of Commission 2010/166/EC, of March 19th, 2010.
(5) Networks exempt from licensing, without prejudice to the act of licensing from the competent Maritime Authority (according to Determination number DE0012011 of BM of ICP-ANACOM, of 6/1/2011).

[1] Exclusive usage channels.
[2] Exclusive band for this service.
[3] Shared usage channels.
[4] Band shared with other users.
[5] According to the Decision of European Commission 2009/449/EC, of May 13th, regarding the selection of pan-European systems operators that allow the offer of satellite mobile communications services (MSS), which defines the eligible candidates.

3.2Reserved frequency bands and to be made available in 2011/2012 for operation of the networks and services of electronic accessible to the public

The terms and abbreviations used have the following meaning:

Need for Usage right: identification of the need to allocate usage rights, according to article 16, of LCE;

Operation mode*: (simplex, duplex or semi-duplex, when applicable)*
. simplex: operation mode in which transfer is possible by alternating the two directions of the telecommunication channel, by using one or two frequencies;
. duplex: operation mode in which transfer is possible simultaneously in both directions of the telecommunication channel, by using two frequencies;
. semi-duplex: simplex operation mode in one end of the telecommunication channel and duplex operation in the other, by using two frequencies;

Type of channel: *spacing between adjoining channels, when applicable*;

Shared usage: usage of a channel/frequency by more than one entity;

Exclusive usage: usage of a channel/frequency by a single entity;

Usage basis:
n - national basis: usage of a channel/frequency at national territory level;
g - geographic limit: usage of a channel/frequency in a certain and well defined area, by radiocommunications stations, such as, fixed stations, broadcast stations and earth stations;

Allocation process: full accessibility or selection method by competition or comparison.

[1] Not applicable.
[2] Band shared with other users.

Annex 4

USAGES EXEMPT FROM LICENSING

Spectrum usages exempt from radio licensing

4.1. Exemption of network license

According to item a) of number 1 and number 2 of article 9 of Decree-Law number 151-A/2000, July 20th, as amended by Decree-Law number 264/2009, September 28th, the following are exempt from network license:

a) Fixed Service Networks in high frequency (short wave);

b) Fixed Service Satellite Networks, except for VSAT earth station networks;

c) Satellite Meteorology Service Networks;

d) Space Operations Service Networks;

e) Satellite Earth Exploration Service Networks;

f) Aeronautical Mobile Service Networks;

g) Maritime Mobile Service Networks;

h) Port Operations Service Networks;

i) Broadcast Service Networks composed of Analogical Television Broadcast stations;

j) Broadcast Service Networks composed of Analogical Audio Broadcast stations;

k) Broadcast Service Networks composed of digital audio Broadcast stations (DRM - Digital Radio Mondiale);

l) Terrestrial Radiodetermination Service Networks;

m) Satellite Radiodetermination Service Networks;

n) Radioastronomy Service Networks;

o) Private Networks of SMT for Calling and Searching People (SCPP), whose characteristics and/or stations that integrate them present the following characteristics:

Characterization of stations			
Frequency bands	**Maximum power limits**	**Type of antenna**	**Channel spacing**
40.680 MHz	5 W e.r.p.	External - station base Integrated - portable	20 kHz
169.175 MHz	5 W e.r.p.	External - station base Integrated - portable	25 kHz
468.1125 MHz	2 W e.r.p.	External - station base Integrated - portable	12.5 kHz
468.1250 MHz	2 W e.r.p.	External - station base Integrated - portable	
469.275 MHz	5 W e.r.p.	External - station base Integrated - portable	25 kHz

p) The networks composed of mobile/portable radiocommunications stations and which normally are identified by cordless telephones (CTs) and that display the following characteristics:

Characterization of stations				
System Technology	**Frequency bands**	**Maximum power limits**	**Type of antenna**	**Channel spacing**
CT0 (analogical)	27.5375 - 27.8375 MHz	power at transmitter output 10 mW	integrated or dedicated	25 kHz
	36.9875 - 37.2875 MHz			
DECT (digital)	1880 -1900 MHz	250 mW	integrated or dedicated	1.728 MHz

q) Networks composed of stations installed on board aircraft and associated mobile stations:

Mobile communications on board aircraft (MCA) [(a)] [(b)]			
Frequency bands	**Maximum power limits [(c)]**	**Minimum operation height above ground [m] [(c)]**	**Channel spacing**
1710 - 1785 MHz 1805 - 1880 MHz	-13 dBm/200 kHz	3000	200 kHz

[(a)] It is mandatory to comply with all the technical conditions specified in the Decision of Commission 2008/294/EC, of April 7th, 2008.
[(b)] Networks exempt from licensing, without prejudice to the compliance of the requirements foreseen in Determination number of the BM of ICP-ANACOM, of 13/8/2008, regarding the introduction of mobile communication services on board aircraft (MCA).
[(c)] The maximum power limit of the base station / NCU varies with the height of operation above ground, according to Decision of the Commission 2008/294/EC, April 7th, 2008.

r) Networks composed of stations installed on board vessels and associated mobile stations:

Mobile Communications on Board Vessels (MCV) [a] [b]		
Frequency bands	**Maximum power limits of the terminal**	**Channel spacing**
890 - 914 MHz 935 – 959 MHz	5 dBm	200 kHz
1710 - 1785 MHz 1805 - 1880 MHz	0 dBm	200 kHz

s) Networks composed of:

Analogical PMR446 Stations that display the following characteristics

Characterization of stations			
Frequency band	**Maximum power limits**	**Type of antenna**	**Channel spacing**
446.0 – 446.1 MHz [c]	500 mW e.r.p.	integrated	12.5 kHz

Digital PMR446 Stations that display the following characteristics

Characterization of stations			
Frequency band	**Maximum power limits**	**Type of antenna**	**Channel spacing**
446.1 – 446.2 MHz [d]	500 mW e.r.p.	integrated	6.25 kHz or 12.5 kHz

[a] It is mandatory to comply with all the technical conditions specified in the Decision of Commission 2010/166/EU, of March 19th, 2010.
[b] Networks exempt from licensing, without prejudice to the act of licensing from the competent Maritime Authority (according to Determination number DE0012011 of BM of ICP-ANACOM, of 6/1/2011).
[c] Channel according to Decision ERC/DEC/(98)25.
[d] Channel according to Decision ERC/DEC/(05)12.

Talk-Back (return channels/order circuits) that display the following characteristics

Characterization of stations		
Frequency band	**Maximum limits of radiated power**	**Channel spacing**
445.150 MHz	3W e.i.r.p.	25 kHz
448.300 MHz		
448.325 MHz		
448.350 MHz		
448.375 MHz		
448.400 MHz		
448.425 MHz		
448.450 MHz		
448.475 MHz		

Spectrum usages exempt from radio licensing

4.2. Exemption of station license

According to item b) of number 1 and number 2 of article 9 of Decree-Law number 151-A/2000, July 20th, as amended by Decree-Law number 264/2009, September 28th, the following are exempt from station license:

a) Stations with little power and short range ("SRD-Short Range Devices")

The short range stations are composed of equipments used in many applications and frequency bands.

These stations must operate under the principle:

a) Of non interference, regarding licensed radiocommunications stations or networks;
b) Of non protection, regarding any other radiocommunications stations or networks.

The following tables include the requirements of the community Decisions, namely Decision 2006/771/EC, November 9th, 2006, as well as later changes, in Decisions 2008/432/EC, May 23rd, 2008, 2009/381/EC, May 3rd, 2009, 2010/368/EU, June 30th, 2010 and 2011/829/EU, from December 8th, 2011. Whenever possible, the bands and parameters harmonized in CEPT for SRD are also adopted, included in Recommendation ERC/REC 70-03.

SRD - Characterization of stations					
Application	**Frequency bands**	**Power or field strength**	**Type of antenna**	**Channel spacing**	**"*Duty Cycle*"**
General usage [1]	6765 - 6,795 kHz	42 dB μA/m at 10 m	Integrated or dedicated	Occupation of the entire band	
	13.553 - 13.567 MHz				
	26.957 - 27.283 MHz				
	40.660 - 40.700 MHz	10 mW e.r.p.			< 1%
	138.20 – 138.45 MHz [2]				< 10%
	433.050 - 434.790 MHz [3]				≤ 100%
	433.050 - 434.790 MHz [4]	1 mW e.r.p.[5]			
	434.040 – 434.790 MHz[4]	10 mW e.r.p.		≤ 25 kHz	
	863 - 870 MHz[3, 6, 7]	≤ 25 mW e.r.p.		≤ 100 kHz [8] for 47 channel or more	≤ 0,1%
		≤ 25 mW e.r.p. -4.5 dBm/100 kHz [9]		Occupation of the entire band	≤ 0,1%
		≤ 25 mW e.r.p.		≤ 100 kHz [8,] for 1 channel or more	≤ 0,1%
	868.000 - 868.600 MHz [10]	≤ 25 mW e.r.p.		Occupation of the entire band, for 1 or more channels [8]	≤ 1% [7]
	868.700 - 869.200 MHz [10]				≤ 0,1% [7]
	869.400 - 869.650 MHz	≤ 500 mW e.r.p.		25 kHz, for one channel or more[11]	≤ 10% [12]
	869.700 – 870.000 MHz	≤ 5 mW e.r.p.[13]		Occupation of the entire band, for 1 or more channels	≤ 100%
		≤ 25 mW e.r.p.[14]			≤ 1%[15]

[1] Video applications must be used preferably above 2.4 GHz.
[2] *Duty cycle*, LBT or equivalent technique cannot depend on the user and must be assured by adequate technical means. For LBT devices without Adaptive Frequency Agility (AFA), or equivalent techniques, the duty cycle limit *applies*. For any type of device with AFA the duty cycle *limit applies* during transfer unless LBT or equivalent technique is used.
[3] Audio and video applications are allowed as long as they use digital modulations with maximum bandwidth of 300 kHz. Voice applications are allowed with bandwidth of ≤25 kHz.
[4] Audio and video applications are excluded. Voice applications are allowed with bandwidth of ≤25 kHz and spectrum mitigation techniques. The transmitter must include an output power control sensor with a time-out up to 1 minute.
[5] The power density for modulations with bandwidth above 250 kHz is limited to -13 dBm/10 kHz.
[6] Sub-bands for alarms are excluded.
[7] Spectrum access and interference mitigation techniques must be used that offer, at least, an equivalent performance to the techniques described in harmonized standards adopted under Directive 1999/5/EC. As an alternative, a limit for the operation cycle of 0.1% can also be used. The duty cycle can be increased up to 1% if the band is limited to 865-868.6 MHz.
[8] The preferential spacing is 100 kHz and subdivisions of 50 kHz and 25 kHz are allowed.
[9] The power density can be increased up to 6.2 dBm/100 kHz and 0.8 dBm/100 kHz, if the band is limited to 865-868 MHz and 865-870 MHz correspondingly.
[10] Audio and video applications are excluded.
[11] The entire band can be used to transfer data at high speed.
[12] Spectrum access and interference mitigation techniques must be used that offer, at least, an equivalent performance to the techniques described in harmonized standards adopted under Directive 1999/5/EC. As an alternative, a limit for the operation cycle of 10% can also be used.
[13] Audio and video applications are excluded. Voice applications are allowed as long as they use spectrum mitigation techniques.
[14] Analogical audio and video applications are excluded.
[15] Spectrum access and interference mitigation techniques must be used that offer, at least, an equivalent performance to the techniques described in harmonized standards adopted under Directive 1999/5/EC. As an alternative, a limit for the operation cycle of 1.0% can also be used.

SRD - Characterization of stations (cont.)					
Application	**Frequency bands**	**Power or field strength**	**Type of antenna**	**Channel spacing**	***"Duty Cycle"***
General usage (cont.) [1]	2400 - 2,483.5 MHz	10 mW e.i.r.p.	Integrated or dedicated	Occupation of the entire band	
	5725 - 5,875 MHz	25 mW e.i.r.p.			
	24.00 - 24.25 GHz	100 mW e.i.r.p.			
	61.00 - 61.50 GHz				
	122 - 123 GHz				
	244 - 246 GHz				
Detection, tracing and data acquisition systems	456.9 – 457.1 kHz [16]	7 dB μA/m at 10 m		Continuous wave (CW) – without modulation	< 100%
	169.4 – 169.475 MHz [17]	500 mW e.r.p.		Max. 50 kHz	< 10%
	169.4 – 169.475 MHz [18]				< 1%
Wireless access systems / Radio local access networks (WAS/RLAN)	2400 - 2,483.5 MHz	100 mW e.i.r.p.[19]		Occupation of the entire band	
	5150 - 5350 MHz [20,21]	200 mW e.i.r.p.[22]	Dedicated	Occupation of the entire band	
	5470 - 5725 MHz [20, 21]	1 W e.i.r.p. [22]			
	17.1 - 17.3 GHz	100 mW e.i.r.p.			
	57 – 66 GHz	40 dBm e.i.r.p. [23]			
Applications on Railways	2446 - 2,454 MHz [25]	500 mW e.i.r.p.	Integrated		
	27.090 – 27,100 MHz [26]	42 dB μA/m at 10 m	Integrated or dedicated		
	984 – 7,484 kHz [27]	9 dB μA/m at 10 m	Integrated	Occupation of the entire band	< 1%
	516 - 8,516 kHz [28]	7 dB μA/m at 10 m			
	7.3 – 23.0 MHz [29]	-7 dB μA/m at 10m	Dedicated		

[16] Applications for the Detection of Victims of Avalanches, central frequency 457 kHz.
[17] Applications for reading measurements.
[18] Applications object detection and tracing.
[19] For systems with broadband modulations different from FHSS - frequency hopping spread spectrum technique - the maximum value of spectrum power density must be limited to 10 mW/MHz.
[20] According to the Decision of the Commission 2005/513/EC, July 11th, 2005, and 2007/90/EC, February 12th, 2007.
[21] The following conditions must be complied:
a) in the band 5150-5350 MHz only indoor usages are allowed;
b) the systems operating in the bands 5250-5350 MHz and 5470-5725 MHz must use transmitted power control (TPC), which provides, on average, a mitigation factor of 3 dB for the maximum power value allowed. If TPC is not used, the maximum power allowed of average e.i.r.p. and the corresponding maximum value of power density for average e.i.r.p. must be reduced by 3 dB;
c) systems operating in the bands 5250-5350 MHz and 5470-5725 MHz must use mitigation techniques that provide the same level of protection as the operational requirements, for detection and response described in EN 301 893;
d) in the band 5150-5350 MHz the maximum power density value for average e.i.r.p. must be limited to 10mW/MHz, for each 1 MHz;
e) in the band 5470-5725 MHz the maximum power density value for average e.i.r.p. must be limited to 50mW/MHz, for each 1 MHz;
[22] Maximum value of average e.i.r.p.
[23] Restricted to indoor usage. Maximum power density value of average e.i.r.p. is limited to 13 dBm/MHz.
[25] Automatic identification systems for railway vehicles. Transmission only in the presence of trains.
[26] Remote feed and train-station systems, including Eurobeacon and the activation of *loop/Euroloop.* As an option, it can also be used for the activation of *loop/Euroloop*. Central frequency 27,095 MHz.
[27] Station-train beacon systems, including Eurobeacon. Central frequency 4,234 kHz.
[28] Station-train *loop* systems, including *Euroloop*. Central frequency 4516 kHz.
[29] Station-train *loop* systems, including *Euroloop*. Central frequency 13.457 kHz. The maximum value of field density is specified for a bandwidth of 10 kHz, taking the average of the measurement done over 200m of the *loop*. Transmission only in the presence of trains.

SRD - Characterization of stations (cont.)					
Application	**Frequency bands**	**Power or field strength**	**Type of antenna**	**Channel spacing**	***"Duty Cycle"***
Telematic systems of road transportation - RTTT	5795 – 5,805 MHz [30]	2 W e.i.r.p.	Integrated or dedicated	[31]	
	5805 – 5,815 MHz [32]				
	63 -64 GHz [33]	To be defined		Occupation of the entire band	
	76 -77 GHz [34]	55 dBm peak [35]			
	21.65 – 26.65 GHz [36, 37]	[38]			
	77-81 GHz [36, 39]	55 dBm peak [40]			
	24.050 – 24.075 GHz[41]	100 mW e.i.r.p.[42]	Integrated		
	24.075 – 24.150 GHz[41]	0.1 mW e.i.r.p.			4μs/40kHz f/ each 3ms [43]
		100 mW e.i.r.p.			1ms/40kHz f/ each 40ms [44]
	24.150 – 24.250 GHz[41]	100 mW e.i.r.p.			
Radiodetermination Applications	2400 - 2,483.5 MHz	25 mW e.i.r.p.	Integrated or dedicated		
	9200 - 9,500 MHz				
	9500 - 9,975 MHz				
	10.5 – 10.6 GHz	500 mW e.i.r.p.			
	13.4 - 14.0 GHz	25 mW e.i.r.p.			
	24.05 - 24.25 GHz	100 mW e.i.r.p.			
	4.5 – 7.0 GHz[45]	-41.3 dBm/MHz e.i.r.p.			
	8.5 – 10.6 GHz[45]				
	24.05 – 27.0 GHz[45]				
	57 – 64 GHz[45]				
	75 – 85 GHz[45]				
	17.1 - 17.3 GHz [46]	+26 dBm e.i.r.p.			DAA

[30] The band is for road-vehicle systems, in particular (but not exclusively) for automatic toll payment systems.
[31] The frequencies: 5797.5 MHz, 5802.5 MHz, 5807.5 MHz and 5812.5 MHz are used with a channel spacing of 5 MHz. The frequencies 5800 MHz and 5810 MHz are used with a channel spacing of 10 MHz.
[32] Requires individual license.
[33] These systems, vehicle-vehicle or road-vehicle are only exempt from licensing after the definition of the power limits.
[34] Vehicle radar systems and infrastructures.
[35] 55 dBm e.i.r.p. of peak and 50 dBm e.i.r.p. average and 23,5 dBm e.i.r.p. average for impulse radars.
[36] SRR –Short range radar systems for cars.
[37] According to the Decision from the Commission 2011/485/EC, from July 29th, 2011.
[38] The maximum value of the average power density is –41.3 dBm/MHz e.i.r.p. The value of the peak power density must not exceed 0dBm/50 MHz e.i.r.p.
[39] According to the Decision from the Commission 2004/545/EC, July 8th, 2004.
[40] The maximum value of the average power density is –3 dBm/MHz e.i.r.p. The maximum value of the average power density outside a vehicle resulting from the operation of a short range radar must not exceed –9 dBm/MHz e.i.r.p. .
[41] Radars for vehicles.
[42] For peak powers above –10 dBm e.i.r.p. the operation cycle < 10%.
[43] The requirements of mitigation and access to the spectrum apply to devices assembled on the bumper. If assembled without a bumper, the requirement must be 3μs/40kHz of maximum transfer time in each 3ms.
[44] The requirements of mitigation and access to the spectrum apply to devices assembled on a bumper or assembled without bumper.
[45] Tank Level Probing Radar (TLPR). The limit value of radiated power is determined outside the tank's closed structure.
[46] Spectrum access and interference mitigation techniques must be used that offer, at least, an equivalent performance to the techniques described in harmonized standards adopted under Directive 1999/5/EC. Special requirements for the antenna radiation diagram and in the DAA (Detect And Avoid) technical implementation applied as described in standard EN 300 440 for Ground Based Synthetic Aperture Radar (GBSAR) systems.

SRD - Characterization of stations (cont.)					
Application	**Frequency bands**	**Power or field strength**	**Type of antenna**	**Channel spacing**	***"Duty Cycle"***
Alarms	868.600 - 868.700 MHz [47]	10 mW e.r.p.	Integrated or dedicated	25 kHz	< 1,0%
	869.200 - 869.250 MHz [48]				< 0,1%
	869.250 - 869.300 MHz				
	869.300 – 869.400 MHz				< 1,0%
	869.650 - 869.700 MHz	25 mW e.r.p.			< 10%
	169.4750 – 169.4875 MHz [49]	10 mW e.r.p.		12.5 kHz	< 0,1%
	169.5875 – 169.6000 MHz[49]				
Model control	26.995 MHz; 27.045 MHz; 27.095 MHz; 27.145 MHz; 27.195 MHz	100 mW e.r.p.	Dedicated	10 kHz	
	34.995 - 35.225 MHz [50]				
	40.665 MHz; 40.675 MHz; 40.685 MHz; 40.695 MHz				
Inductive applications	9 - 90 kHz	72 dB μA/m at 10 m [51]	Integrated, dedicated or external [52]	Occupation of the entire band	
	90 - 119 kHz	42 dB μA/m at 10 m			
	119 - 135 kHz	66 dB μA/m at 10 m[53]			
	135 - 140 kHz	42 dB μA/m at 10 m			
	140 – 148.5 kHz	37.7 dB μA/m at 10 m			
	6765 - 6795 kHz	42 dB μA/m at 10 m See figure 1, Annex 7, 7.6.a)	Integrated or dedicated		
	7400 – 8,800 kHz	9 dB μA/m at 10 m			
	13.553 - 13.567 MHz	42 dB μA/m at 10 m See figure 1, Annex 7, 7.6.a)			
	13.553 - 13.567 MHz	60 dB μA/m at 10 m See figure 1, Annex 7, 7..6.a) [54]			
	26.957 - 27.283 MHz	42 dB μA/m at 10 m			
	10.200 – 11.000 MHz	9 dB μA/m at 10 m			
	3155 – 3,400 kHz	13.5 dB μA/m at 10 m	Integrated, dedicated or external [52]		
	148.5 kHz–5 MHz	-15 dB μA/m at 10 m[55]			

(47) The frequency band 868.6-868.7 MHz can also be used entirely as a channel for high speed data transfer.
(48) Exclusive band for Social alarms.
(49) Exclusive usage for Social Alarms.
(50) Exclusive frequencies for aeromodels.
51 Decrease of 3 dB/oct at 30 kHz.
52 In case external antennas are used, only antennas of the loop coil type are allowed.
53 Decrease of 3 dB/oct at 119 kHz.
54 For exclusive usage of RFID and EAS (Electronic Article Surveillance).
55 The maximum field intensity value is specified for a bandwidth of 10 kHz. The maximum value allowed -5 dBμA/m at 10 m for systems that operate in bandwidths above 10 kHz keeping the field intensity limit (-15 dBμA/m at 10 m for bandwidth of 10 kHz).

SRD - Characterization of stations (cont.)					
Application	**Frequency bands**	**Power or field strength**	**Type of antenna**	**Channel spacing**	***"Duty Cycle"***
Inductive applications (cont.)	5 -30 MHz	-20 dB μA/m at 10 m[56]	Integrated, dedicated or external [52]	Occupation of the entire band	
	400 – 600 kHz [57]	-8 dB μA/m at 10 m[58]			
Transmitter microphones and hearing aid equipments	173.965 – 174.015 MHz [59]	2 mW e.r.p.	Integrated	50 kHz	≤ 100%
	174 – 216 MHz [60]	50 mW e.r.p.		Occupation of the entire band	
	470 – 862 MHz [60,61]				
	863 – 865 MHz [62]	10 mW e.r.p.			
	1785 – 1,795 MHz	20 mW e.i.r.p. [63]			
	1795 – 1,800 MHz				
	169.4 – 169.4750 MHz [59]	10 mW e.r.p.		Max 50 kHz	
	169.4875 – 169.5875 MHz [59]				
RFID – RF Identification Systems	2446 – 2454 MHz	≤500 mW e.i.r.p.	Integrated or dedicated	Occupation of the entire band	≤ 100%
	865.0 – 865.6 MHz	100 mW e.r.p.		200 kHz	
	865.6 – 867.6 MHz	2 W e.r.p.			
	867.6 – 868.0 MHz	500 mW e.r.p.			
Wireless systems for medical applications	9 – 315 kHz [64]	30 dB μA/m at 10 m	Integrated or dedicated	Occupation of the entire band	<10%
	315 – 600 kHz [65]	-5 dB μA/m at 10 m			
	12.5 – 20.0 MHz [66]	-7 dB μA/m at 10 m[67]			
	30.0 – 37.5 MHz [68]	1 mW e.r.p.			
	402 – 405 MHz [69]	25 μW e.r.p.		25 kHz	
	401 – 402 MHz [70]				[71]
	405 – 406 MHz [70]				

[56] The maximum field intensity value is specified for a bandwidth of 10 kHz. The maximum value allowed -5 dBμA/m at 10 m for systems that operate in bandwidths above 10 kHz keeping the field intensity limit (-20 dBμA/m at 10 m for bandwidth of 10 kHz).
[57] For exclusive usage of RFID.
[58] The maximum field intensity value is specified for a bandwidth of 10 kHz. The maximum value allowed is -5 dBμA/m at 10 m for systems that operate in bandwidths above 10 kHz keeping the field intensity limit (-8 dBμA/m at 10 m for bandwidth of 10 kHz). These systems must operate with a minimum bandwidth of 30 kHz.
[59] Hearing aids.
[60] Ear monitoring devices are allowed, as long as they comply with the technical parameters for transmitter microphones.
[61] The usage of transmitter microphones is only allowed in the sub-bands 470-734 MHz and 742-790 MHz at Madeira island and 470-750 MHz and 758 MHz on the mainland. CEPT is studing the possibility of using sub-band 821-832 MHz for transmitter microphones.
[62] Transmitter microphones.
[63] The maximum power value for "body worn" transmitter microphones is 50 mW e.i.r.p.
[64] For active ultra-low power medical implants that use the inductive *loop* technique for telemetry.
[65] Applications for implants in animals.
[66] For active ultra-low power implants in animals limited to *indoor usage*.
[67] The maximum field intensity value is specified for a bandwidth of 10 kHz.
The transfer mask is defined as follows: 3dB for bandwidth 300 kHz; 10dB for bandwidth 800 kHz; 20dB for bandwidth 2 MHz.
[68] For membrane ultra-low power implants for the measurement of blood pressure.
[69] For active ultra-low power medical implants covered by the harmonized standard EN 301 839. Transmitters can combine adjoining channels in order to increase the bandwidth up to 300 kHz.
[70] For active ultra-low power medical implants and accessories covered by the harmonized standard EN 302 537 and not covered by the frequency band 402–405 MHz. Transmitters can combine adjoining 25 kHz channels in order to increase the bandwidth up to 100 kHz. Due to the limit of 1 MHz of available spectrum, a maximum limit of 100 kHz is proposed for bandwidth. In order to assure the concurrent usage of the band by the users.
[71] Without restriction for equipment that implements LBT. Systems that do not implement *Agility frequency* techniques based on environment RF field detection, must be limited to the maximum allowed of 250 nW e.r.p. with a *duty cycle* of ≤0,1 %.

SRD - Characterization of stations (cont.)					
Application	**Frequency bands**	**Power or field strength**	**Type of antenna**	**Channel spacing**	***"Duty Cycle"***

	458.1250 MHz				
	458.1375 MHz				
	458.1500 MHz				

[71] The SRD user interface must allow at least the selection of a frequency between 88.1 MHz and 107.9 MHz and at most between 87.6 MHz and 107.9 MHz.
[72] In analogical systems the bandwidth used cannot exceed 300 kHz.
[73] Narrow band analogical voice equipments, such as baby monitors, door control systems, etc., are limited to the band 864.8-865 MHz.

b) Earth stations of Satellite Services

HEST and LEST terminals

These stations must operate on a non interference and non protection basis regarding the licensed radiocommunications stations or networks. Using this type of earth stations is only allowed at higher distances than those stated in the table below, starting from the limit area of airports.

Characterization of stations			
Earth station	**Frequency band**	**Maximum power limits (e.i.r.p.)**	**Distance (D) to limit area of airports**
High e.i.r.p. Satellite Terminal Low e.i.r.p. Satellite Terminal	10.70 -12.75 GHz (space-Earth) 19.70 -20.20 GHz (space-Earth) 14.00 -14.50 GHz (Earth-space) 29.50 -30.00 GHz (Earth-space)	e.i.r.p. ≤ 34 dBW	---
		34 dBW < e.i.r.p. ≤ 50 dBW	D > 500 meters
		50 dBw < e.i.r.p. ≤ 55.3 dBW	D > 1800 meters
		55.3 dBW < e.i.r.p. ≤ 57 dBW	D > 2300 meters
		57 dBW < e.i.r.p. ≤ 60 dBW	D > 3500 meters

HDFSS terminals

These stations must operate on a non interference and non protection basis regarding licensed radiocommunications stations or networks.

Characterization of stations			
Earth station	**Frequency band**	**Density limits of e.i.r.p. off axis**	**Minimum elevation angle**
High Density Fixed-Satellite Service Terminal	17.3 - 17.7 GHz Space-Earth	---	5º
	19.7 - 20.2 GHz Space-Earth	---	5º
	27.5 - 27.82 GHz Earth-space	-35 dBW/MHz	10º
	28.45 - 28.94 GHz Earth-space	-35 dBW/MHz	10º
	29.46 - 30.0 GHz Earth-space	-35 dBW/MHz	10º

Earth stations of the Mobile Satellite Service

These stations must operate on a non interference and non protection basis regarding licensed radiocommunications stations or networks.

Characterization of stations	
Earth station	**Frequency band**
Inmarsat-B Inmarsat-C Inmarsat-D Inmarsat-M Inmarsat-M4 Inmarsat-phone (mini M) EMS-MSSAT Thuraya SpaceCheckers-SMS	1525 - 1,544 MHz (space-Earth) [1] 1545 - 1,559 MHz (space-Earth) [2] 1626.5 - 1645.5 MHz (Earth-space) [1] 1646.5 - 1660.5 MHz (Earth-space) [2,3]
EUTELTRACS	10.70 - 11.70 GHz (space-Earth) [4] 12.50 - 12.75 GHz (space-Earth) [4] 14.00 - 14.25 GHz (Earth-space)
GMPCS [5]	1525 - 1544 MHz (space-Earth) [1] 1545 - 1,559 MHz (space-Earth) [2] 1626.5 - 1645.5 MHz (Earth-space) [1] 1646.5 - 1660.5 MHz (Earth-space) [2, 3] 1610 - 1626.5 MHz (Earth-space) 1621.35 - 1,626.5 MHz (space-Earth) 1980 - 2,010 MHz (Earth-space) 2483.5 - 2,500 MHz (space-Earth) 2170 - 2,200 MHz (space-Earth)
Mobile Earth Stations (MES) ORBCOM [6]	137 - 138 MHz (space-Earth) 148 - 150.05 MHz (Earth-space)
AES [7]	10.70 - 11.70 GHz (space-Earth) 12.50 - 12.75 GHz (space-Earth) 14.00 - 14.25 GHz (Earth-space)

1 In the frequency bands 1530-1544 MHz and 1626.5-1645.5 MHz help, emergency and security communications in the GMDSS system have priority.
2 In bands 1545 - 1555 MHz and 1646.5-1656.5 MHz, for the Aeronautical Satellite Mobile Service, help and emergency communications, as well as communications regarding the security and regularity of flights and meteorology, have priority.
3 In the band 1660 - 1660,5 MHz the operation of these earth stations cannot cause harmful interferences to radioastronomy service stations.
4 In the bands 10.70-11.70 GHz and 12.50-12.75 GHz, the operation of the earth stations "Omnitracs-Eutelsat" cannot cause interferences to stations of the Fixed and Fixed Satellite Services.
5 These stations must bear the marking described in figure 2.
6 These stations must not cause interferences or require protection of stations of the fixed, mobile and space operation stations in the frequency band 148-149.9 MHz and satellite radionavigation stations in the frequency band 149.9-150.05 MHz.
7 AES must operate on a non interference and non protection basis regarding licensed radiocommunications stations or networks.

Earth stations on board Vessels – (ESV)

ESV earth stations installed on board vessels must operate on a non interference and non protection basis regarding licensed radiocommunications stations or networks.

Characterization of stations [1]	
Earth station	**Frequency band**
ESV	3700 – 4200 (space-Earth) [2,3] 5925 - 6425 MHz (Earth-space) [2,3] 10.7 - 11.7 GHz (space-Earth) [4] 12.5 - 12.75 GHz (space-Earth) [4] 14.00 - 14.5 GHz (space-Earth) [4]

[1] In the terms of Determination of the Board of Management of ICP-ANACOM in 29.6.2011 about the Exemption of radio license of ESV earth stations and radiodetermination stations installed on vessels. Distances above 300 km, from the normal base line, along the Portuguese coast.
[2] Operation according to the technical and operational conditions determined in Resolution 902 (WRC-03), licensed by IPTM according to the law in effect.
[3] Distances above 300 km, from the normal base line, along the Portuguese coast.
[4] Operation according to the technical and operational conditions determined in Resolution 902 (WRC-03) and Decision ECC/DEC/(05)10, licensed by IPTM according to the law in effect.

c) Radiocommunications stations exclusively for reception

These stations must operate on a non interference and non protection basis regarding licensed radiocommunications stations or networks.

Characterization of stations
Receiving stations • multiband, not associated in particular with any radiocommunications service ("scanners") • of the satellite radiocommunications services in the frequency bands: 3.4-4.2 GHz 10.7-12.75 GHz 17.7-20.2 GHz • of the AIS system • of the radiogoniometry system • of the Radioastronomy Service [1] • of the satellite Radiodetermination service [2] • of the satellite Meteorology service • of the satellite Earth Exploration service

d) Television and audio broadcast stations exclusively for reception.

e) Aeronautical mobile service and radiodetermination service stations on board aircraft, certified by INAC[3].

f) Radiodetermination service stations on vessels, licensed by IPTM[4].

[1] Radio protection can be assured to Radioastronomy stations operating in frequency bands allocated to this service with Primary status, according to radio licensing.
[2] Radio protection can be assured to earth stations operating in frequency bands allocated to this service with Primary status, according to radio licensing. This procedure does not apply to GPS and GLONASS terminals.
[3] According to the Order of the President of the Board of Management of ICP-ANACOM of 4.9.2009, ratified by the determination of the Board of Management of ANACOM of 9.9.2009.
[4] According to the Determination of the Board of Management of ICP-ANACOM de 29.6.2011 regarding the Exemption of radio licensing of ESV earth stations and radiodetermination stations on board vessels.

Annex 5

EQUIPMENTS / SYSTEMS THAT USE ULTRA WIDE BAND (UWB) TECHNOLOGY

Equipments / systems that use ultra wide band (UWB) technology must operate on a "non interference and non protection regime", in which no harmful interferences can be caused to any radiocommunications service and in which the protection of those devices against harmful interferences caused by radiocommunications services cannot be claimed.

5.1 Generic UWB equipments

UWB technology allows developing several systems for different applications, namely communications and location systems, medical systems among others. This technology allows transferring large quantities of information in short distances with low emissions powers. UWB equipments are characterized by their need of large bandwidths, which makes their emissions spread across the spectrum, overlapping several radiocommunications services.

These equipments must respect the conditions established in Decision of the Commission 2009/343/EC, April 21st, 2009, which changes Decision 2007/131/EC, February 21st, 2007, regarding the usage of harmonized conditions in the radio spectrum for equipments that use ultra wide band technology in the Community (equivalent ECC Decisions adopted by the Portuguese Administration: ECC/DEC/(06)04 and ECC/DEC/(06)12), and must be used indoors, or if used outdoors, must not be attached to a fixed installation, a fixed infrastructure or a fixed external antenna.

Generic UWB equipments are exempt from radio licensing.

5.1.1 Maximum densities of e.i.r.p. in the absence of adequate mitigation techniques

Frequency band (GHz)	Maximum value of average density of e.i.r.p. (dBm/MHz)	Maximum value of peak density of e.i.r.p. (dBm/50 MHz)
Below 1.6	– 90,0	– 50,0
1.6 to 2.7	– 85,0	– 45,0
2.7 to 3.4	– 70,0	– 36,0
3.4 to 3.8	– 80,0	– 40,0
3.8 to 4.8	– 70,0	– 30,0
4.8 to 6.0	– 70,0	– 30,0
6.0 to 8.5	– 41,3	0,0
8.5 to 10.6	– 65,0	– 25,0
Above 10.6	– 85,0	– 45,0

Table 5.1.1: Maximum densities of e.i.r.p. for generic UWB in the absence of adequate mitigation techniques

5.1.2 Adequate mitigation techniques

5.1.2.1 Low Duty Cycle (LDC) mitigation technique

The maximum values of – 41.3 dBm/MHz are allowed for the average density of e.i.r.p. and 0 dBm for peak of e.i.r.p (measured at 50 MHz), in band 3.1 - 4.8 GHz, as long as a restriction is applied to the low duty cycle, so that the sum of the duration times of all transmitted signals is less than 5 % of the time in each second and lower than 0.5 % of the time in each hour and as long transmitted signal does not have a duration above 5 ms (according to Decision ECC/DEC/(06)12).

5.1.2.2 Detect And Avoid (DAA) mitigation technique

The maximum values of – 41.3 dBm/MHz are allowed for the average density of e.i.r.p. and 0 dBm for peak of e.i.r.p. (measured at 50 MHz), in the bands 3.1 - 4.8 GHz and 8.5 – 9.0 GHz, as long as a detect and avoid (DAA) mitigation technique described in the

pertinent harmonized standards according to Directive 1999/5/CE (according to Decision ECC/DEC/(06)12).

5.1.3 Operation of equipments that use ultra wide band technology in automotive and railway vehicles

Using ultra wide band equipments is authorized inside automotive and railway vehicles and as long as that usage respects the following parameters.

5.1.3.1 Maximum densities of e.i.r.p. for usage of ultra wide band technology in automotive and railway vehicles

The equipments that use ultra wide band technology installed inside automotive and railway vehicles can use the radio spectrum, as long as they respect the limits for e.i.r.p. established in section 5.1.1, and if they are applied, in band 6.0 – 8.5 GHz, the following parameters:

Frequency band (GHz)	Maximum value of average density of e.i.r.p. (dBm/MHz)	Maximum value of peak density of e.i.r.p. (dBm/50 MHz)
6.0 to 8.5	– 41,3 Subject to implementation of power control of the transmitter's power (TPC) with a range of, at least, 12 dB.	0
	– 53.3 (if TPC is not implemented)	-13,3

Table 5.1.3.1: Maximum densities of e.i.r.p. for usage of ultra wide band technology in automotive and railway vehicles

5.1.3.2 Adequate mitigation techniques for automotive and railway vehicles

5.1.3.2.1 Low Duty Cycle (LDC) mitigation technique

The operation of equipments that use ultra wide band technology inside automotive and railway vehicles is authorized, and in which

the LDC mitigation technique is applied in band 3.1 – 4.8 GHz, as stated in section 5.1.2.1, with the application to e.i.r.p. of the limits established in the same section. The limits established in section 5.1.1 for e.i.r.p. apply to the remaining frequency bands. The LDC technique can also be used in band 6.0 – 8.5 GHz, as an alternative to the implementation of TPC, since it provides an equivalent degree of protection (according to Decision ECC/DEC/(06)12).

5.1.3.2.2 Detect And Avoid (DAA) mitigation technique

The operation of equipments that use ultra wide band technology inside automotive and railway vehicles is authorized and in which the DAA mitigation technique is applied in the bands 3.1-4.8 GHz and 8.5- -9.0 GHz with a limit for e.i.r.p. of – 41.3 dBm/MHz, as long as interference mitigation techniques are applied with a performance level equal or above to that of techniques described in the harmonized standards adopted in accordance with Directive 1999/5/EC. These demand that the transmitter's power control (TPC) has a range of, at least, 12 dB. In the remaining cases, a limit of – 53.3 dBm/MHz is applicable for e.i.r.p. (according to Decision ECC/DEC/(06)12).

5.2 Specific UWB equipments

a) GPR/WPR viewing systems

UWB GPR/WPR viewing systems allow developing several types of applications, among others, to locate underground gas leaks, locate survivors in avalanches, locate "objects" underground and inside "walls", locate deficiencies in structures such as roads, and are operated by qualified professionals.

The purpose of these systems is not radio communications. The planned usage for this type of systems excludes radiation to open space, which must be absolutely avoided. UWB GPR systems must radiate directly in

a downward direction to the subsoil, while UWB WPR systems must radiate directly towards a "wall".

UWB GPR/WPR systems will be subject to a licensing regime that is being developed by ICP-ANACOM.

For the purpose of Decision ECC/DEC/(06)08 "Undesired emissions" was defined as the emissions that are radiated in all directions above the "ground/wall" coming from UWB GPR/WPR equipments, including direct emissions from the equipment itself, as well as emissions reflected or that cross the "structure" being investigated.

The maximum values of the average power densities and the peak powers, of any "undesired emission" emanating from UWB GPR/WPR systems cannot exceed the limits defined in Tables 5.2.1 and 5.2.2, respectively. It must be referred that the average power density must be determined according to the formulas (1) and (2) in Annex 1 of Decision ECC/DEC/(06)08 and the peak power value must be measured according to standard ETSI EN 302 066-1.

Maximum value of average power density of any "undesired emission" from UWB GPR/WPR viewing systems	
Frequency band (MHz)	**Maximum value of average density of e.i.r.p. (dBm/MHz)**
Below 230	- 65,0
230 to 1000	- 60,0
1000 to 1600	-65,0 [1]
1600 to 3400	- 51,3
3400 to 5000	- 41,3
5000 to 6000	- 51,3
Above 6000	- 65,0

Table 5.2.1: Maximum value of average power density of any "undesired emission" from UWB GPR/WPR viewing systems

Maximum value of measured radiated power density of any "undesired emission" from UWB GPR/WPR viewing systems	
Frequency band (MHz)	**Maximum value of peak power**

[1] Additionally to the maximum value of average density of e.i.r.p. in the table above, in the bands RNSS, 1164 – 1215 MHz and 1559 – 1610 MHz, a maximum value of average density of e.i.r.p. of –75 dBm/kHz is applied if there are spectral lines in these bands.

30 to 230	- 44.5 dBm/120kHz (e.r.p.)
> 230 to 1000	- 37.5 dBm/120kHz (e.r.p.)
> 1000 to 18000	- 30 dBm/MHz (e.i.r.p.)

Table 5.2.2: Maximum value of measured radiated power density of any "undesired emission" from UWB GPR/WPR viewing systems

These equipments must be according to the conditions established in Decision ECC/DEC/(06)08, regarding the conditions of usage for radio spectrum by UWB GPR/WPR viewing systems.

b) BMA Equipment

UWB BMA equipments allow developing several types of applications, among others, to locate "objects", such as electrical cables and wires inside "walls" and to determine the thickness of structures such as walls in buildings. The purpose of these equipments is not radio communications.

These equipments must respect the conditions established in Decision of the Commission 2009/343/EC, April 21st, 2009, which changes Decision 2007/131/EC, February 21st, 2007, regarding the usage of harmonized conditions in the radio spectrum for equipments that use ultra wide band technology in the Community (equivalent ECC Decision adopted by the Portuguese Administration: ECC/DEC/(07)01, March 30th, 2007, which defines "Undesired emissions" as the emissions that are radiated in all directions coming from BMA equipments, including direct emissions from the equipment itself, as well as emissions reflected or that cross the "structure" being investigated.

UWB BMA equipments are exempt from radio licensing.

The maximum values of the average power densities and the peak powers, of any "undesired emission" emanating from UWB GPR/WPR systems cannot exceed the limits defined in **Table 5.2.3**. Additionally, the spectral density of TRP must be 5 dB below the maximum value of average spectral density of e.i.r.p. defined in **Table 5.2.3**.

Maximum values of average power densities and peak powers, of any "undesired emission" emanating from BMA systems		
Frequency band (GHz)	**Maximum value of average density of e.i.r.p. (dBm/MHz)**	**Maximum value of peak e.i.r.p. (measured at 50 MHz) (dBm)**
Below 1.73 Nota 1	- 85	- 45
1.73 to 2.2	- 65	- 25
2.2 to 2.5	- 50	- 10
2.5 to 2.69 Nota 1	- 65	- 25
2.69 to 2.7 Nota 2	- 55	- 15
2.7 to 3.4 Note 1	- 82	- 42
3.4 to 4.8	- 50	- 10
4.8 to 5.0 Note 2	- 55	- 15
5.0 to 8.0	- 50	- 10
8.0 to 8.5	- 70	- 30
Above 8.5	- 85	- 45

Table 5.2.3: Maximum values of average power densities and peak powers, of any "undesired emission" emanating from BMA systems

These equipments must be according to the conditions established in Decision ECC/DEC/(07)01, regarding the conditions of usage for radio spectrum by UWB BMA viewing systems.

Note 1: Devices that use the LBT mechanism, as described in standard EN 302 435, and that comply with the technical requirements defined in Annex 2 of Decision ECC/DEC/(07)01, can operate in the frequency band 1.215 – 1.73 GHz with the maximum limit of average e.i.r.p. of – 70 dBm/MHz and a maximum limit of peak e.i.r.p. of – 30 dBm/50MHz, and in the frequency bands 2.5 – 2.69 GHz and 2.7 – 3.4 GHz with a maximum limit of average e.i.r.p. of – 50 dBm/MHz and a maximum limit of peak e.i.r.p. of – 10 dBm/50MHz.
Note 2: In order to protect the radioastronomy service in the bands 2.69 – 2.7 GHz and 4.8 – 5 GHz, the spectral density of TRP must be below – 65 dBm/MHz.

Annex 6

USAGE OF FREQUENCIES BY THE AMATEUR AND AMATEUR SATELLITE SERVICES

6.1 Access to the spectrum per amateur categories

According to number 1 of article 15 of Decree-Law number 53/2009, March 2nd, access to frequency bands by the different amateur categories is done according to the following conditions:

Frequency bands [i]	Accessibility by the amateur categories and maximum allowed powers [W] [a) b)]				Status of Services [e)]	
	1 and A [c)]	B	2 [(4)]	C	Amateur	Amateur satellite
135,7 - 137,8 kHz	1[e.i.r.p.]	1[e.i.r.p.]			S	
1.810 - 1.830 [g)] kHz	200				S	
1.830 - 1.850 kHz	1500	750			P	
3.500 - 3.700 kHz	1500	750			P	
3.700 - 3.800 kHz	1500	750	200		P	
7.000 - 7.100 kHz	1500	750			P	P
7.100 - 7.200 kHz	1500	750	200		P	
10.100 - 10.150 kHz	750	200			S	
14.000 - 14.125 kHz	1500	750			P	P
14.125 - 14.250 kHz	1500	750	200		P	P
14.250 - 14.350 kHz	1500	750	200		P	
18.068 - 18.168 kHz	1500	750			P	P
21.000 - 21.151 kHz	1500	750			P	P
21.151 - 21.450 kHz	1500	750	200		P	P
24.890 - 24.990 kHz	1500	750			P	P
28 - 29,7 MHz	1500	750	200	100	P	P
50 - 50.5 [f)] MHz	25[e.r.p.]	25[e.r.p.]			S	
70,1570 - 70,2125 MHz	100[e.r.p.]				S	
70,2375 - 70,2875 MHz	100[e.r.p.]				S	
144 - 145,806 MHz	300 [j)]	150 [j)]	150	50	P	P
145,806 - 146 MHz	300	150	150			P
430 - 435 MHz	300 [j)]	150 [j)]	150	50	P	
435 - 438 MHz	300	150				S
438 - 440 MHz	300	150	150	50	P	
1.240 - 1.260 MHz	50[e.i.r.p.]	50[e.i.r.p.]			S	
1.260 - 1.270 MHz	50[e.i.r.p.]	50[e.i.r.p.]				S
1.270 - 1.300 MHz	300[e.i.r.p.] [j)]	300[e.i.r.p.] [j)]			S	
2.300 - 2.400 MHz	[h)]	[h)]			S	
2.400 - 2.450 MHz	[h)]	[h)]			S	S

Frequency bands [i]		Accessibility by the amateur categories and maximum allowed powers [W][a) b)]				Status of Services [e]	
		1 and A [c]	B	2 [(4)]	C	Amateur	Amateur satellite
5.650 - 5.668	MHz	h)	h)				S
5.668 - 5.670	MHz	h)	h)			S	S
5.670 - 5.830	MHz	h)	h)			S	
5.830 - 5.850	MHz	h)	h)				S
10 - 10,37	GHz	300[e.i.r.p.] [j)]	300[e.i.r.p.] [j)]			S	
10,37 - 10,45	GHz	h)	h)			S	
10,45 - 10,5	GHz	300[e.i.r.p.]	300[e.i.r.p.]			S	S
24 - 24,05	GHz	50	10	10		P	P
24,05 - 24,25	GHz	50	10			S	
47 - 47,2	GHz	50	10	10		P	P
75,5 - 76	GHz	50				S	S
76 - 77,5	GHz	50				S	S
77,5 - 78	GHz	50	10	10		P	P
78 - 81	GHz	50				S	S
122,25 - 123	GHz	50				S	
134 - 136	GHz	50	10	10		P	P
136 - 141	GHz	50				S	S
241 - 248	GHz	50				S	S
248 - 250	GHz	50	10	10		P	P

a) - peak power when no indication otherwise

b) - the used power must be the minimum necessary to perform communication

c) - applicable to holders of CEPT license issued under Recommendation CEPT Rec. T/R 61-01, in the conditions included in it, and to the holders of the Certificate of Radioamateur Stations Operator (COER) of class A issued by the Administration of the Federal Republic of Brazil in temporary stays

d) - applicable to holders of license "*CEPT novice*" issued under Recommendation CEPT ECC/REC/(05)06, in the conditions included in it, and to the holders of the Certificate of Radioamateur Stations Operator (COER) of class B issued by the Administration of the Federal Republic of Brazil in temporary stays

e) - P (primary) or S (secondary) according to the concepts presented in number 7.1 of Annex 7

f) - upper limit of band will be 52 MHz after release of band on 26-04-2012 by the broadcast service

g) - in the POR geographic area, usage is limited to a non interference base with the other services outside Portuguese territory

h) - authorizations granted vase by case only for scientific studies, experiments or other activities of interest for amateur radio and for time limited periods

i) - the emission modes and used bandwidths must follow the recommendation of IARU in everything that does not infringe on applicable law, in particular, the frequency plans for certain bands defined and published by ICP-ANACOM

j) - for usages in which the antennas are aimed at space (for example, for lunar reflection) there is no maximum power limit. However, the maximum power determined must not be exceeded, according to the horizon, for the corresponding frequency band

Annex 7

APPENDICES

7.1 Definitions

a) Concepts

Awarding (a frequency or radio channel):

Registration of a given channel in a plan adopted by a competent conference, in order to use it for one or more administrations for a radiocommunications service on Earth or in space, in one or more countries or determined geographic areas and according to specified conditions.

Allocation (of a frequency band):

Registration in the Table of Frequency Allocation of a determined frequency band, in order to use it by one or more radiocommunications services on Earth or space, or by the radioastronomy service in specified conditions. This term applies also to the considered frequency band.

Primary allocation (of a frequency band):

The services, which are in upper case (e.g. FIXED) on the Table of Frequency Allocation, have a primary status (see definition of Secondary allocation).

Secondary allocation (of a frequency band):

The services, which are not in upper case (e.g. Fixed) on the Table of Frequency Allocation, have a secondary status. A secondary service station:

- must not cause harmful interference to primary service stations with frequencies that have already been consigned or that will be consigned later;

- cannot claim protection from harmful interference from primary service stations with frequencies that have already been consigned or that will be consigned later;

- can claim protection from harmful interference from stations with the same service (secondary) or other service(s) also with the same status, as long as the frequency has been consigned to them on a previous date.

Consignment (a frequency or radio channel):

Authorization given by an administration for the usage of a radio station of a frequency or radio channel according to specified conditions.

Radio waves or microwaves

Electromagnetic waves with a frequency lower than 3000 GHz, which propagate through space without artificial guide.

Emission:

Energy flux produced in the form of radio waves, from an emitting radio station.

Emission class:

Set of characteristics of an emission, such as the type of modulations of the main carrier, nature of the modulation signal, type of information being transmitted and, eventually, other characteristics. Each class is designated by a set of standard symbols.

Emission on a single lateral band:

Emission in amplitude modulation containing only one of two lateral bands.

Consigned frequency band:

Frequency band inside which the emission of a given station is authorized

Consigned frequency:

Centre of the frequency band consigned to a station

Characteristic frequency:

Frequency that can be easily identified and measured in a given emission. A carrier frequency, for example, can be designated as a characteristic frequency.

Reference frequency:

Frequency that is a fixed and well determined position regarding the consigned frequency. The distance of that frequency from the consigned frequency is, in greatness and signal, the same as that of the characteristic frequency regarding the centre of the frequency band occupied by the emission.

Frequency tolerance:

Maximum allowed distance between the consigned frequency and the frequency in the centre of the band occupied by an emission, or between the reference frequency and the characteristic frequency of an emission. The frequency tolerance is expressed in "parts per 10^6" or in "Hertz".

Power:

Whenever the power of a radio transmitter is stated, it should be expressed in one of the following ways, according to class of emission, using the indicated symbols:

Peak power (PX or pX)

Average power (PY or pY)

Carrier power (PZ or pZ)

For the different classes of emission, the relations between the peak power, the average power and the carrier power, in normal operating conditions and in the absence of modulation, are stated in ITU-R Recommendations, which can be used as guide.

In formulas, the p symbol indicates the power in Watt and the symbol P the power in decibels regarding a reference level.

Peak power (of a radio transmitter):

Average of the power supplied at the feed line of the antenna by a transmitter in normal operation, during a radiofrequency cycle corresponding to the maximum amplitude of the modulation envelope.

Average power (of a radio transmitter):

Average of the power supplied at the feed line of the antenna by a transmitter in normal operation, during a relatively long period of time regarding the period of the component with the lowest modulation frequency.

Power carrier (of a radio transmitter):

Average of the power supplied at the feed line of the antenna by a transmitter in normal operation, during a radiofrequency cycle, in the absence of modulation.

b) Radiocommunications Services

Amateur Service (AM):

Radiocommunications service for individual training, intercommunication and technical studies, done by amateurs, i.e., duly authorized people who are interested in the radio technique for a personal and not commercial gain.

Amateur satellite (AMS):

Radiocommunications service using space stations located on satellites of Earth for the purposes as the amateur service.

Meteorology Ancillary Services (METAX):

Radiocommunications services for observations and research used for meteorology, including hydrology.

Special Service (ESP):

Radiocommunications service not defined specifically, done exclusively to meet certain needs of general interest and not open to public correspondence.

Satellite Earth Exploration Service (EXP-S):

Radiocommunications service between earth stations and one or more space stations, which can include connections between space stations, in which:

- Information regarding the Earth's characteristics and of its natural phenomena are obtained from active or passive detectors located on satellites of the Earth;
- Analogical information is collected from airborne platforms or platforms located on Earth.
- This information can be distributed to earth stations belonging to the same system.
- Platform questioning can be included.

This service can also include connections needed for its operation.

Fixed Service (FIX):

Radiocommunications service between determined fixed points.

Fixed satellite service (FIX-S):

Radiocommunications service between Earth stations located on certain fixed points using one or more satellites; in certain cases, this service includes connections between satellites, which can also be assured by the intersatellite service; the fixed satellite service can also include connections to other space radiocommunications services.

Standard frequency and time signal service (FPH):

Radiocommunications service that assures, for scientific, technical and other purposes, the emission of specified frequencies, of time signals or of both at the same time, with high precision and aimed at general reception.

Satellite standard frequency and time signal service (FPH-S):

Radiocommunications service using space stations located on satellites of Earth for the same purposes as the standard frequency and time signal service.

This service can also include connections needed for its operation.

Intersatellite Service (INT-S):

Radiocommunications service assuring the connections between artificial satellites of Earth.

Space Investigations Service (INVES):

Radiocommunications service in which space devices and other space objects are used for scientific research or technology.

Satellite Meteorology Service (MET-S):

Earth exploration service by satellite for meteorological purposes.

Mobile Service (MOV):

Radiocommunications service between mobile and earth stations or between mobile stations (CV).

Fixed Mobile Service (MV-S):

Radiocommunications service between mobile stations and one or more space stations, or between space stations used by this service, or between mobile earth stations, through one or more space stations.

This service can also include connections needed to its operation.

Aeronautical Mobile Service (MA):

Mobile service between aeronautical stations and aircraft stations, or between aircraft stations, in which rescue device stations may also participate. The radiobeacon stations for the location of accidents can also participate in this service in established danger and emergency frequencies.

Satellite Aeronautical Mobile Service (MA-S):

Mobile satellite service in which mobile earth stations are located on board aircraft. The rescue device stations and radiobeacon stations for the location of accidents can also participate in this service.

Aeronautical Mobile Service (R)* (MAR):

Aeronautical mobile service, reserved to communications regarding security and regularity of flights, mainly in national and international courses of civil aviation.

* (R): route.

Satellite Aeronautical Mobile Service (R)* (MAR-S):

Satellite aeronautical mobile service, reserved to communications regarding security and regularity of flights, mainly in national and international courses of civil aviation.

* (R): route.

Mobile aeronautical Service (OR)** (MAOR):

Aeronautical mobile service, in order to assure communications including those regarding flight coordination, mainly outside national and international courses of civil aviation.

** (OR): off-route.

Satellite Aeronautical Mobile Service (OR)* (MAO-S):

Satellite aeronautical mobile service, in order to assure communications including those regarding flight coordination, mainly outside national and international courses of civil aviation.

** (OR): off-route.

Maritime Mobile Service (MM):

Mobile service between coast stations and stations in vessels or between associated communications stations on board vessels. The rescue device stations and radiobeacon stations for the location of accidents can also participate in this service.

Satellite Maritime Mobile Service (MM-S):

Mobile satellite service in which mobile earth stations are located on board vessels. The rescue device stations and radiobeacon stations for the location of accidents can also participate in this service.

Terrestrial Mobile Service (MT)

Mobile service between base stations and terrestrial mobile stations or between terrestrial mobile stations.

Satellite Terrestrial Mobile Service (MT-S):

Mobile satellite service in which mobile earth stations are located on land.

Vessel Movement Service (ONS):

Security service included in the maritime mobile service, which is not the port operations service, between coast stations and vessels stations, or between

vessel stations, with the purpose of transmitting messages regarding exclusively the movement of vessels.

The messages with a character of public correspondence are excluded from this service.

Space Operations Service (OE):

Radiocommunications service destined exclusively to the exploration of space devices, in particular space tracking, space remote measurement and space remote command. These functions are usually assured by the service in which the space stations operates.

Port Operations Service (OP):

Maritime mobile service in a harbour or surroundings of a harbour, between coast stations and vessel stations, or between vessel stations, with the purpose of transmitting messages that deal only with the manoeuvring, movement and security of vessels and, in case of emergency, with safeguarding people.

The messages with a character of public correspondence are excluded from this service.

Radioastronomy Service (RAST):

Service that involves the usage of radioastronomy.

Radiocommunications Service:

Service that implies the transmission, emission and/or reception of radio waves with specific telecommunications purposes.

Unless otherwise stated, any radiocommunications service refers to Earth radiocommunications.

Radiodetermination Service (RDT):

Radiocommunications service for the purpose of radiodetermination.

Satellite Radiodetermination Service (RDT-S):

Radiocommunications service for the purpose of radiodetermination and involving the usage of one or more space stations.

This service can also include connections needed for its operation.

Broadcast Service (RAD):

Radiocommunications service whose emissions are to be received directly by the general public. This service can include audio emissions, television emissions and other types of emissions (CS).

Satellite Broadcast Service (RAD-S):

Radiocommunications service in which the signals transmitted or retransmitted by space stations are aimed at being received directly by the general public.

In the satellite broadcast service, the expression "received directly" applies simultaneously to the individual and community reception.

Radiolocation Service (RLC);

Radiocommunications service for the purpose of radiolocation.

Satellite Radiolocation Service (RLC-S):

Satellite radiocommunications service for the purpose of radiolocation.

This service can also include connections needed for its operation.

Radionavigation Service (RV);

Radiocommunications service for the purpose of radionavigation.

Satellite Radionavigation Service (RV-S):

Satellite radiocommunications service for the purpose of radionavigation.

This service can also include connections needed for its operation.

Aeronautical Radionavigation Service (RVA):

Radionavigation service for the needs of aircraft and the security of their operation.

Satellite Aeronautical Radionavigation Service (RVA-S):

Satellite radionavigation service in which earth stations are located on board aircraft.

Maritime Radionavigation Service (RVM):

Radionavigation service for the needs of vessels and the security of their operation.

Satellite Maritime Radionavigation Service (RVM-S):

Satellite radionavigation service in which earth stations are located on board vessels.

Security Service (SEG):

Any radio service operated permanently or temporarily to assure the security of human life and the safeguarding of goods (CV).

Adaptive System:

Radiocommunications system that adapts its radio characteristics according to the channel's quality.

ISM (Industrial, Scientific and Medical) Usages:

Usage of devices and installations designed to produce and use, in a reduced space, radio energy for industrial, scientific, medical, domestic or similar purposes, excluding any telecommunications usage.

c) Aspects regarding SRD - Short Range Devices

Dedicated antenna - Removable antenna, indicated by the manufacturer, always having as reference the maximum limit of established e.i.r.p..

External antenna - Antenna which was not designed specifically for a certain type of station.

Integrated antenna - Permanent fixed antenna, designed as an indispensable part of the equipment.

Railway applications - Specific applications for railways, including automatic vehicle identification and beacons (train control systems).

Model control - Equipment to control the movement of models in the air, on the ground, above and under water.

Movement detection and alert - Equipment for the detection of movement and alert equipment (small power radar systems for radiodetermination: determination of position, speed and/or other characteristics of an object, or the collection of information regarding these parameters).

***Duty cycle* -** Percentage of time in which an equipment is active.

Spread spectrum - Transmission technology in which the signal takes up a much larger bandwidth than the necessary minimum to send information.

Frequency hopping spread spectrum - Spread spectrum technology in which the information is sent in several channels in a pseudo-random way.

Direct sequence spread spectrum - Spread spectrum technology in which the information is combined with a pseudo-random code.

Active medical implants with very low power - Instruments, equipments, devices, materials and other items, to be used alone or in a set, for: diagnosing, preventing, monitoring, treating or mitigating illness; diagnosing, monitoring, treating or mitigating or compensating injuries or deficiencies; researching, replacing or changing the anatomy or a physiological process; design control.

Harmful interference - Any interference that compromises the operation of a radionavigation service, or any other security service, or that in any way seriously damages, obstructs, or repeatedly interrupts a radiocommunications service that operates according to the applicable community or national aw.

LBT – *Listen Before Talk* – Listening to the channel before starting to transmit.

Equivalent radiated power (e.r.p.) in a given direction **-** the product of the power supplied to the antenna by its gain regarding a dipole of half of a wavelength in a given direction.

Equivalent isotropic radiated power (e.i.r.p.) in a given direction **-** the product of the power supplied to the antenna by its gain regarding an isotropic antenna in a given direction (isotropic or absolute gain).

Average equivalent isotropic radiated power (e.i.r.p.) - Is the average of e.i.r.p. throughout a data burst, when the power control is on its highest value.

RFID - RF identification systems; automatic identification of items, locations of goods, alarm systems, remainders management, personnel identification, access control, proximity sensors, anti-theft systems, location systems, data transfer for portable equipments, wireless control systems.

Wireless audio systems - Wireless speakers; wireless headphones; wireless headphones for portable use, e.g. CD or cassette players, or portable radios; wireless headphones for usage inside vehicles, e.g. for radios, telephones, etc.; in-ear monitoring for concerts and other types of stage productions.

Inductive applications - Vehicle immobilisers, animal identification, alarm systems, cable detection, remainders management, personnel identification, wireless voice connections, access control, proximity sensors, anti-theft systems, including anti-theft induction RF systems, data transfer for portable equipments, automatic item identification, wireless control systems and automatic tolls.

Road transportation telematic systems - Communications systems for transportation support (mobile data connections between vehicles and infrastructure).

SRD - The term *Short Range Devices* includes the radio transmitters that establish uni-directional or bi-directional communications and which have a low probability of causing interference to other radio equipments. SRDs use integrated antennas, dedicated or external, and all types of modulation can be allowed, as long as the specifications of the relevant standards are complied with. Given the diversity of the services supplied by these equipments, there cannot be an exhaustive description.

7.2 Table of frequency tolerances for transmitters

The different categories of transmitter stations must comply with the corresponding frequency tolerances specified in Appendix 2 of the ITU Radiocommunications Regulations, transcribed below.

Table of frequency tolerances for transmitters

1 Frequency tolerance is defined in Article 1 of RR and, unless stated otherwise, is expressed in parts per 10^6.

2 The power referred for the different station categories is, unless stated otherwise, the peak power of a single lateral band transmitter and the average power for all other transmitters. The expression "power of a radio transmitter" is defined Article 1 of RR.

3 For technical and operational reasons, certain station categories may need more rigorous categories than those stated on the table.

Frequency bands (excluding the lower limit, including the upper limit) and station categories	**Tolerances applicable to the transmitters**
Band: **9 kHz to 535 kHz**	
1 *Fixed stations:*	
– from 9 kHz to 50 kHz	100
– from 50 kHz to 535 kHz	50
2 *Terrestrial stations:*	
a) Coastal stations	100 [1, 2]
b) Aeronautical stations	100
3 *Mobile stations:*	
a) Stations in vessels	200 [3, 4]
b) Help transmitters on vessels	500 [5]
c) Stations in survival vessels	500
d) Aircraft stations	100
4 *Radiodetermination stations*	100
5 *Broadcast stations*	10 Hz
Band: **535 kHz to 1 606.5 kHz (1 605 kHz in Region 2)** *Broadcast stations*	10 Hz (WRC
Band: **1 606.5 kHz (1 605 kHz in Region 2) to 4 000 kHz**	
1 *Fixed stations:*	
– with power lower or equal to 200 W	100 [7, 8]
– with power higher than 200 W	50 [7, 8]
2 *Terrestrial stations:*	
– with power lower or equal to 200 W	100 [1, 2, 7, 9, 10]
– with power higher than 200 W	50 [1, 2, 7, 9, 10]

Frequency bands (excluding the lower limit, including the upper limit) and station categories	**Tolerances applicable to the transmitters**
Band: **1 606.5 kHz (1 605 kHz in Region 2) to 4 000 kHz***(cont.)*	
3 *Mobile stations:*	
a) Stations in vessels	40 Hz [3, 4, 12]
b) Stations in survival vessels	100
c) Radiobeacons for accident location	100
d) Stations in aircraft	100 [10]
e) Terrestrial mobile stations	50 [13]
4 *Radiodetermination stations:*	
– with power lower or equal to 200 W	20 [14]
– with power higher than 200 W	10 [14]
5 *Broadcast stations*	10 Hz [15]
Band: **4 MHz to 29.7 MHz**	
1 *Fixed stations:*	
a) Emissions on a single lateral band and independent lateral band:	50 Hz
– with power lower or equal to 500 W	20 Hz
– with power higher than 500 W	10 Hz
b) Emissions of class F1B	
c) Other classes of emission:	20
– with power lower or equal to 500 W	10
– with power higher than 500 W	
2 *Terrestrial stations:*	
a) Coastal stations	20 Hz [1, 2, 16]
b) Aeronautical stations:	
– with power lower or equal to 500 W	100 [10]
– with power higher than 500 W	50 [10]
5 Base stations	20 [7]
3 *Mobile stations:*	
a) Stations in vessels:	
1) Emissions of class A1A	10
2) Emissions of class other than A1A	50 Hz [3, 4, 19]
b) Stations in survival vessels	50
c) Stations in aircraft	100 [10]
d) Terrestrial mobile stations	40 [20]
4 *Broadcast stations*	10 Hz [15, 21]
5 *Space stations*	20
6 *Earth stations*	20

Frequency bands (excluding the lower limit, including the upper limit) and station categories	**Tolerances applicable to the transmitters**
Band: **29.7 MHz to 100 MHz**	
1 *Fixed stations:*	
– with power lower or equal to 50 W	30
– with power higher than 50 W	20
2 *Terrestrial stations*	20
3 *Mobile stations*	20 [22]
4 *Radiodetermination stations*	50
5 *Broadcast stations (other than television)*	2 000 Hz [23]
6 *Broadcast stations (television, audio and video)*	500 Hz [24, 25]
7 *Space stations*	20
8 *Earth stations*	20
Band: **100 MHz to 470 MHz**	
1 *Fixed stations:*	
– with power lower or equal to 50 W	20 [26]
– with power higher than 50 W	10
2 *Terrestrial stations:*	
a) Coastal stations	10
b) Aeronautical stations	20 [28]
5 Base stations:	
– in the band 100-235 MHz	15 [29]
– in the band 235-401 MHz	7 [29]
– in the band 401-470 MHz	5 [29]
3 *Mobile stations:*	
a) Stations in vessels and stations in survival vessels	10
– in the band 156-174 MHz	50 [31]
– outside band 156-174 MHz	
b) Stations in aircraft	30 [28]
c) Terrestrial mobile stations:	
– in the band 100-235 MHz	15 [29]
– in the band 235-401 MHz	7 [29, 32]
– in the band 401-470 MHz	5 [29, 32]
4 *Radiodetermination stations*	50 [33]
5 *Broadcast stations (other than television)*	2 000 Hz [23]
6 *Broadcast stations (television, audio and video)*	500 Hz [24, 25]
7 *Space stations*	20
8 *Earth stations*	20

Frequency bands (excluding the lower limit, including the upper limit) and station categories	**Tolerances applicable to the transmitters**
Band: **470 MHz to 2 450 MHz**	
1 *Fixed stations:*	
– with power lower or equal to 100 W	100
– with power higher than 100 W	50
2 *Terrestrial stations*	20 [36]
3 *Mobile stations*	20 [36]
4 *Radiodetermination stations*	500 [33]
5 *Broadcast stations (other than television)*	100
6 *Broadcast stations (television, audio and video)* in the band 470 MHz to 960 MHz	500 Hz [24, 25]
7 *Space stations*	20
8 *Earth stations*	20
Band: **2 450 MHz to 10 500 MHz**	
1 *Fixed stations:*	
– with power lower or equal to 100 W	200
– with power higher than 100 W	50
2 *Terrestrial stations*	100
3 *Mobile stations:*	100
4 *Radiodetermination stations*	1 250 [33]
5 *Space stations*	50
6 *Earth stations*	50
Band: **10.5 GHz to 40 GHz**	
1 *Fixed stations*	300
2 *Radiodetermination stations*	5 000 [33]
3 *Broadcast stations*	100
4 *Space stations*	100
5 *Earth stations*	100

Notes regarding the table of frequency tolerance of transmitters

[1] For transmitters in coastal stations used for telegraphy with direct printing or for data transfer, the tolerance is:
- 5 Hz for the manipulation by phase variation in narrow band;
- 15 Hz for manipulation by frequency variation for the transmitters in usage or installed before January 2nd, 1992;
- 10 Hz for manipulation by frequency variation for the transmitters installed after January 1st, 1992;

[2] For transmitters in coastal stations used for selective digital call, the tolerance is 10 Hz. (WRC

[3] For transmitters in vessel stations used for telegraphy with direct printing or for data transfer, the tolerance is:
- 5 Hz for the manipulation by phase variation in narrow band;
- 40 Hz for manipulation by frequency variation for the transmitters in usage or installed before January 2nd, 1992;
- 10 Hz for manipulation by frequency variation for the transmitters installed after January 1st, 1992;

[4] For transmitters in vessel stations used for selective digital call, the tolerance is 10 Hz. (WRC

[5] If the emergency transmitter is used as a backup transmitter in order to replace the main transmitter, in case it is needed, the tolerance for vessel stations applies.

[6] (SUP - WRC-03)

[7] For radiotelephony transmitters in single lateral band, except those in coastal stations, the tolerance is:
- 50 Hz in the bands 1 606.5 (1 605 in Region 2)-4 000 kHz and 4-29.7 MHz for peak power lower or equal to 200 W and 500 W , respectively;
- 20 Hz in the bands 1 606.5 (1 605 in Region 2)-4 000 kHz and 4-29.7 MHz for peak power higher than 200 W and 500 W, respectively;

[8] For radiotelegraphy transmitters with manipulation by frequency manipulation, the tolerance is 10 Hz.

[9] For transmitters in radiotelephony coastal stations in single lateral band, the tolerance is 20 Hz.

[10] For transmitters in single band working in the frequency bands 1 606.5 (1 605 Region 2)-4 000 kHz and 4

a) for all aeronautical stations, 10 Hz;

) for all stations in aircraft that operate in international services, 20 Hz;

c) for all stations in aircraft that operate exclusively in national services, 50 Hz[*].

[11] Not being used.

[12] For emissions in class A1A, tolerance is 50×10^{-6}.

[13] For transmitters used for radiotelephony in single lateral band or radiotelegraphy transmitters with manipulation by frequency manipulation, the tolerance is 40 Hz.

[14] For radiobeacon transmitters in the band 1606.5 (1 605 in Region 2)-1 800 kHz, tolerance is 50×10^{-6}.

[*] NOTE – In order to reach the maximum intelligibility, it is suggested to administrations that encourage the reduction of this tolerance to 20 Hz.

[15] For emissions of class A3E with a carrier power lower or equal to 10 kW, tolerance is 20 x 10^{-6}, 15 x 10^{-6} and 10 x 10^{-6} in the bands 1 606.5 (1 605 in Region 2)-4 000 kHz, 4-5.95 MHz and 5.95-29.7 MHz respectively.

[16] For emissions in class A1A, tolerance is 10 x 10^{-6}.

[17] Not being used.

[18] Not being used.

[19] For transmitters on vessel stations in the band 26 175-27 500 kHz, installed on board small vessels with carrier power lower or equal to 5 W, operating in coastal waters or surroundings and using emissions of class F3E and G3E, the frequency tolerance is 40 x 10^{-6}. (WRC

[20] For radiotelephony transmitters in single lateral band, tolerance is 50 Hz, except for transmitters operating in the band 26 175-27 500 kHz and that do not exceed a peak power of 15 W, for which a basic tolerance of 40 x 10^{-6} applies.

[21] It is suggested that administrations avoid differences in carrier frequency of few hertz, which cause degradations similar to fadings. This can be avoided if the frequency tolerance is 0.1 Hz, a tolerance that would be adequate for emissions in single lateral band*.

[22] For portable equipment not installed in vehicles with an average power not higher than 5 W, the tolerance is 40 x 10^{-6}.

[23] For transmitters with an average power lower or equal to 50 W, operating in frequencies lower than 108 MHz, a tolerance of 3 000 Hz applies.

[24] In the case of television stations:

- with an image peak power lower of equal to 50 W, in the band 29.7-100 MHz;
- with an image peak power lower of equal to 100 W, in the band 100-960 MHz;

and that receive their emissions from other television stations, or that serve small isolated communities, it may not be possible to keep this tolerance for operational reasons. For these stations, the tolerance is 2 000 Hz.

For stations with an image peak power lower or equal to 1 W, this tolerance can be additionally lowered to:
- 5 kHz in the band 100-470 MHz;
- 10 kHz in the band 470-960 MHz.

[25] For transmitters that use the M (NTSC) system, the tolerance is 1 000 Hz. However, for low power transmitters that use this system, a Note 24 applies .

[26] For microwave link systems with multiple hopping that use direct frequency conversion, the tolerance is 30 x 10^{-6}.

[27] Not being used.

[28] For 50 kHz channel spacing, the tolerance is 50 x 10^{-6}.

[29] These tolerances apply to spacings between channel equal or higher than 20 kHz.

* NOTE – The single lateral band system adopted for the bands allocated exclusively to the broadcast service in short wave does not require a frequency tolerance under 10 Hz. The degradation mentioned above occurs when the relation of useful signal/interfering signal is clearly inferior to the required protection relation. This observation is valid for emissions in double lateral band and in single lateral band.

[30] Not being used.

[31] For transmitters used by on-board communications stations, a tolerance of 5×10^{-6} applies.

[32] For portable equipment not installed in vehicles with an average power not higher than 5 W, the tolerance is 15×10^{-6}.

[33] If specific frequencies are not allocated to radar stations, the bandwidth occupied by those stations will be kept completely inside the service band allocated to the service and the stated tolerance does not apply.

[34] Not being used.

[35] Not being used.

[36] By recommending this tolerance, the administrations must take into account the most recent Recommendations from ITU-R.

7.3 Acronyms

AES - Aircraft Earth Stations

AIS - Automatic Identification System

AM - Amateur Service

AMS - Satellite Amateur Service

BMA - Building Material Analysis

BWA - Broadband Wireless Access

CB - Citizen Band

CDMA - Code Division Multiple Access

CEPT - Conference of European Postal and Telecommunications Administrations

COSPAS - "COsmicheskaya Sistyema Poiska Avariynich Sudov", Space System for the Search of Vessels in Distress

CT0 - Cordless Phones

DAA **-** Detect And Avoid

DEC - Decision

DCS 1800 - Digital Cellular Telecommunications Systems in the 1800 MHz band

DECCA - LF Hyperbolic Radionavigation System

DECT - Digital Enhanced Cordless Telecommunications

DME - Aeronautical radionavigation system in ultra-high frequency (UHF Distance Measuring Equipment)

DMO - Direct Mode Operation

DSC - Digital Selective Call

DVB-T - Terrestrial Digital Video Broadcasting system

ECA - European Common Allocation table

ECC - Electronic Communications Committee

ENG - Electronic News Gathering

ENG/OB - Electronic News Gathering / Outside Broadcasting

ERC European Radiocommunications Committee

ERO European Radiocommunications Office

ESP - Special Service

ESV - Earth Stations on Vessels

EUTELSAT EUropean TELecommunications SATellite Organisation

EUTELTRACS - EUTELsat Transport RAnging and Communication Services

EXP-S - Earth Exploration Satellite service

FIX - Fixed Service

FIX-S - Fixed Satellite Service

FPH - Standard frequency and time signal service

FPH-S - Satellite standard frequency and time signal service

FWA - Fixed Wireless Access

GE-75 - Regional Administrative Conference of broadcasting in low and medium frequency (Region 1 and 3) - Geneva, 1975

GE-84 - Regional Administrative Conference for the planning of broadcast in very high frequency (Region 1 and part of Region 3) - Geneva, 1984

GE-85 -(Radiobeacons) Regional Administrative Conference for the planning of maritime radionavigation service (radiobeacons) in the European maritime zone - Geneva, 1985

GE-85 - Regional Administrative Conference for the planning of mobile maritime and aeronautical radionavigation services in medium frequency (Region 1) - Geneva, 1985

GMDSS - Global Maritime Distress and Safety System

GMPCS - Global Mobile Personal Communications by Satellite

GPR/WPR - Ground- and Wall- Probing Radar

GPS - Global Positioning System

GSM - Global System for Mobile Communications

GSO - Geostationary Satellite Orbit

HAPS - High Altitude Platform Stations

HDFSS - High Density Fixed-Satellite Service

HDTV - High Definition TeleVision

7.4 Relevant Documents from CEPT, ITU and EU

CEPT Documents

CEPT/ECC Decisions

ECC/DEC/(08)01 **-** Decision on the harmonized usage of the frequency band 5875-5925 MHz for *Intelligent Transport Systems* (ITS).

ECC/DEC/(07)02 **-** Decision on the availability of frequencies in the band 3400 – 3800 MHz for the harmonized implementation of BWA systems.

ECC/DEC/(07)01 **-** Decision on BMA ultra wide band equipments that use ultra wide band (UWB) technology.

ECC/DEC/(06)12 **-** Decision on the harmonized conditions for equipments that use ultra wide band (UWB) technology with the LDC mitigation technique in the frequency bands 3.4-4.8 GHz.

ECC/DEC/(06)09 **-** Designation of bands 1980-2010 MHz and 2170-2200 MHz for usage of systems in the satellite mobile service including Complementary Ground Component (CGC).

ECC/DEC/(06)08 **-** Decision on the conditions of usage of the radio spectrum by GPR/WPR ultra wide band viewing systems.

ECC/DEC/(06)07 **-** Harmonization of GSM systems on board aircraft in the frequency bands 1710-1785 and 1805-1880 MHz.

ECC/DEC/(08)08 **-** Harmonization of GSM systems on board vessels in the frequency bands 880-915/925-960 MHz and 1710-1785 and 1805-1880 MHz.

ECC/DEC/(06)06 **-** Decision on the availability of frequency bands for the introduction of Digital Terrestrial Mobile Systems of Narrow Band PMR/PAMR in the bands 80 MHz, 160 MHz and 400 MHz.

ECC/DEC/(06)05 **-** Decision on the harmonized frequency bands to be designated for the Air-Ground-Air (AGA) operation of digital terrestrial mobile systems for the emergency services.

ECC/DEC/(06)04 **-** Decision on the harmonized conditions for equipments that use ultra wide band (UWB) technology in bands below 10.6 GHz.

ECC/DEC/(06)03 **-** Exemption of licensing of individual LEST terminals (low e.i.r.p. satellite terminals) operating in the frequency bands 10.70-12.75 GHz or 19.70-20.20 GHz (space-Earth) and 14.00-14.25 GHz or 29.50-30.00 GHz (space-Earth)

ECC/DEC/(06)02 **-** Exemption of licensing of individual HEST terminals (high e.i.r.p. satellite terminals) operating in the frequency bands 10.70-12.75 GHz or 19.70-20.20 GHz (space-Earth) and 14.00-14.25 GHz or 29.50-30.00 GHz (space-Earth).

ECC/DEC/(06)01 **-** Decision on the harmonized usage of spectrum for terrestrial systems IMT-2000/UMTS operating in bands 1900-1980 MHz, 2010-2025 MHz and 2110-2170 MHz.

ECC/DEC/(05)12 **-** Decision on the harmonization of frequencies, technical characteristics, exemption if individual license and use of digital applications PMR446, operating in the frequency band 446.1-446.2 MHz.

ECC/DEC/(05)11 **-**Decision on the free circulation and use of earth stations on board aircraft (AES) operating in the frequency bands 14.0-14.5 GHz (Earth-space), 10.7-11.7 GHz (space-Earth) and 12.5-12.75 GHz (space-Earth).

ECC/DEC/(05)08 **-**Decision on the availability of frequency bands for HDFSS applications (space-Earth and Earth-space)

ECC/DEC/(05)05 **-** Harmonization of spectrum usage for IMT-2000/UTMS in the frequency bands 2500-2690 MHz.

ECC/DEC/(05)01 **-** Decision on the usage of the band 27.5-29.5 GHz by the Fixed Service and earth stations not coordinated by the Satellite Fixed Service (Earth-space)

ECC/DEC/(04)10 **-** Decision on the temporary introduction of SRR in the band 24 GHz.

ECC/DEC/(04)09 **-** Decision on the designation of bands 1518 - 1525 MHz and 1670 - 1675 MHz for the Satellite Mobile Service.

ECC/DEC/(04)08 **-** Decision on harmonized frequency bands for wireless access systems including RLANs.

ECC/DEC/(04)06 **-** Decision on the introduction of digital terrestrial mobile broadband PMR/PAMR in the bands of 400 MHz and 800/900 MHz.

ECC/DEC/(04)03 **-** Decision on SRR in band 77-81 GHz.

ECC/DEC/(03)02 **-** Designation of band 1479.5-1492 MHz for usage of S-DAB systems.

ECC/DEC/(02)07 **-** Harmonized usage of band 1670-1675/1800-1805 MHz and elimination of Decision ERC (92)01 of TFTS.

ECC/DEC/(02)06 **-** UMTS/IMT2000 in frequency band 2500-2690 MHz.

ECC/DEC/(02)05 **-** Designation and provision of frequencies for railway applications in the 876-880 MHz and 921-925 MHz band.

ECC/DEC/(02)04 **-** Terrestrial systems (fixed/broadcast system) and earth stations not coordinated of the satellite fixed system and satellite broadcast system (space-Earth) in the frequency band 40.5-42.5 GHz.

ECC/DEC/(02)01 **-** Coordinated introduction of road transportation telematic systems (RTTT).

CEPT/ERC Decisions

ERC/DEC/(01)19 **-** DMO frequencies for emergency services.

ERC/DEC/(01)17 **-** SRDs for medical implants in the frequency band 402-405 MHz.

ERC/DEC/(01)16 **-** SRDs for inductive applications in 26.957-27.283 MHz.

ERC/DEC/(01)12 **-** SRDs for model control in the frequencies 40.665 MHz, 40.675 MHz, 40.685 MHz and 40.695 MHz.

ERC/DEC/(01)11 **-** SRDs for model aircraft in the frequency band 34.995-35.225 MHz.

ERC/DEC/(01)10 **-** SRDs for model control in the frequencies 29.995 MHz, 27.045 MHz, 27.095 MHz, 27.145 MHz and 27.195 MHz.

ERC/DEC/(01)08 **-** SRDs for movement detection and alert in the frequency band 2400-2483.5 MHz.

ERC/DEC/(01)07 **-** SRDs for WLANs in the frequency band 2400-2483.5 MHz.

ERC/DEC/(01)03 **-** Non-specific SRDs in the frequency band 40.660-40.700 MHz.

ERC/DEC/(01)02 **-** Non-specific SRDs in the frequency band 26.957-27.283 MHz.

ERC/DEC/(00)02 **-** Frequency band 37.5-40.5 GHz for the fixed service and fixed satellite service.

ERC/DEC/(99)15 **-** Decision on the harmonized frequency band 40.5-43.5 GHz for the introduction of multimedia wireless systems (MWS) and point-to-point connections of wireless fixed systems.

ERC/DEC/(98)25 **-** Decision on the harmonized frequency band to be reserved for PMR 446.

ERC/DEC/(97)03 **-** Decision on the harmonized usage of spectrum for satellite personal communications systems (S-PCS) in

bands 1610-1626.5 MHz, 2483.5-2500 MHz, 1908-2010 MHz and 2170-2200 MHz..

ERC/DEC/(97)02 - Decision on extension frequency bands for the pan-European digital GSM communications system.

ERC/DEC/(95)03 - Decision on frequency bands to be reserved for the introduction of DCS 1800 system.

ERC/DEC/(94)03 - Decision on frequency bands to be reserved for the coordinated introduction of the European wireless digital telecommunications system (DECT).

ERC/DEC/(94)01 - Decision on frequency bands to be reserved for the coordinated introduction of the pan-European public cellular digital terrestrial mobile communications system (GSM).

CEPT/ECC Recommendations

ECC/REC/(09)01 - Plan for frequencies of fixed service systems in the band 57-64 GHz.

ECC/REC/(06)04 - Usage of frequency band 5725-5875 MHz for *Broadband Fixed Wireless Access* (BFWA).

ECC/REC/(05)08 - Plan for frequencies and frequency coordination for terrestrial mobile systems GSM 900, GSM 1800, E-GSM and GSM-R (except DMO, *direct mode operation* channels).

ECC/REC/(05)07 - Plan for frequencies of fixed service systems in the band 71-76 GHz and 81-86 GHz.

ECC/REC/(05)06 - *CEPT Novice* license for amateur.

ECC/REC/(05)02 - Plan for frequencies of fixed service systems in the band 64-66 GHz.

ECC/REC/(02)06 - Plan for frequencies of digital systems in the fixed service in the band 7125-8500 MHz.

ECC/REC/(02)02 - Plan for harmonized frequencies of fixed service systems in the band 31-31.3 GHz.

ECC/REC/(01)04 - Harmonized frequency band 40.5-43.5 GHz for the accommodation of multimedia wireless systems (MWS) and point-to-point connections of wireless fixed systems.

CEPT/ERC Recommendations

ERC/REC/(01)02 - Plan for frequencies of fixed service digital systems in the band 31.8-33.4 MHz.

ERC/REC 70-03 **-** Short Range Devices (SRD).

ERC/REC 25-10 **-**Frequencies for ENG/OB video connections.

ERC/REC 14-03 **-**Plan for harmonized frequencies and allocation of blocks to small and medium capacity systems in the band 3400-3600 MHz.

ERC/REC 14-02 **-**Plan for frequencies for analogical systems with medium and high capacity and for high capacity digital systems in the band 6425-7125 MHz.

ERC/REC 14-01 **-**Plan for frequencies for analogical and digital systems with high capacity in the band 5925-6425 MHz.

ERC/REC 13-03 **-**Band 14.0–14,5 GHz for VSAT and SNG.

ERC/REC 12-12 **-**Plan for frequencies of fixed service systems in the band 55.78-57 GHz.

ERC/REC 12-11 **-**Plan for frequencies of fixed service systems in the band 51.4-52.6 GHz.

ERC/REC 12-10 **-**Plan for harmonized frequencies of fixed service digital systems in the band 48.5-50.2 GHz.

ERC/REC 12-08 **-**Plan for harmonized frequencies and allocation of blocks to small, medium and high capacity systems in the band 3600-4200 MHz.

ERC/REC 12-07 **-**Plan for harmonized frequencies of terrestrial digital fixed service systems in the band 15.23-15.35 GHz.

ERC/REC 12-06 **-**Plan for harmonized frequencies of terrestrial digital fixed service systems in the band 10.7-11.7 GHz.

ERC/REC 12-03 **-**Plan for harmonized frequencies of terrestrial digital fixed service systems in the band 17.7-19.7 GHz.

ERC/REC 12-02 **-**Plan for harmonized frequencies of terrestrial analogical and digital fixed service systems in the band 12.75-13.25 GHz.

CEPT Rec. T/R 61-02 -Harmonized certificate for amateur (HAREC).

CEPT Rec. T/R 61-01 **-**CEPT license for amateur.

CEPT Rec. T/R 32-02 -Frequencies for usage of stations on board vessels.

CEPT Rec. T/R 22-06 **-**Harmonized frequency bands for HIPERLANS in bands 5 GHz and 17 GHz.

CEPT Rec. T/R 22-02 **-**Frequencies for DECT systems.

CEPT Rec. T/R 20-09 **-**PR27 equipments for voice availability in the frequency band 27 MHz.

CEPT Rec. T/R 13-02 **-**Plan for frequencies of fixed service systems in the frequency band 22-29.5 GHz.

CEPT Rec. T/R 13-01 **-**Plan for frequencies of fixed service systems in the frequency band 1-3 GHz.

CEPT Rec. T/R 12-01 **-**Plan for harmonized frequencies of terrestrial analogical and digital fixed service systems in the band 37-39.5 GHz.

EU Documents

Decisions

2011/829/EU - Commission Implementation Decision, of 8 December 2011, amending Decision 2006/771/EC on harmonisation of the radio spectrum for use by short-range devices

2011/485/UE - Commission Implementing Decision of 29 July 2011 amending Decision 2005/50/EC on the harmonisation of the 24 GHz range radio spectrum band for the time-limited use by automotive short-range radar equipment in the Community

2011/251/EU - Execution Decision from the Commission, April 18th, 2011, which amends Decision 2009/766/EC regarding the harmonization of frequency bands 900 MHz and 1 800 MHz for terrestrial systems capable of providing pan-European electronic communications services in the Community.

2010/368/EU - Decision of the Commission, June 30th, 2010, which amends Decision 2006/771/EC regarding "the harmonization of the radio frequency spectrum for its usage by short range equipments".

2010/267/EU - Decision of the Commission, May 6th, 2010, on harmonised technical conditions of use in the 790-862 MHz frequency band for terrestrial systems capable of providing electronic communications services in the European Union.

2010/166/EC - Decision of the Commission, March 19th, 2010, regarding the harmonization of technical conditions for usage of frequency band 790-862 MHz by terrestrial systems capable of supplying electronic communications services in the European Union.

2009/766/EC - Execution Decision from the Commission, October 16th, 2009, regarding the harmonization of frequency bands 900 MHz and 1 800 MHz for terrestrial systems capable of providing pan-

European electronic communications services in the Community.

2009/449/EC - Decision of the Commission, May 13th, regarding the selection of pan-European systems operators that allow the offer of satellite mobile communications services (MSS).

2009/381/EC - Decision of the Commission, May 13th, 2010, which amends Decision 2006/771/EC regarding "the harmonization of the radio frequency spectrum for its usage by short range equipments".

2009/343/EC - Decision of the Commission, April 21st, 2009, which amends Decision 2007/131/EC regarding the usage in harmonized conditions of the radio frequency spectrum for equipments that use ultra wide band technology in the Community.

2008/673/EC - Decision of the Commission, August 13th, 2009, which amends Decision 2005/928/EC regarding the harmonization of frequency bands 169.4-169.8125 MHz (Ex-ermes) in the Community.

2008/671/EC - Decision of the Commission, August 5th, 2008, regarding the harmonized usage of radio spectrum in the frequency bands 5875 - 5905 MHz for applications regarding security in the Intelligent Transport Systems domain (ITS).

2008/626/EC - Decision of the Commission, June 30th 2008, regarding the selection and authorization of systems that provide satellite mobile communications services (MSS).

2008/477/EC - Decision of the Commission, June 13th, 2008, regarding the harmonization of frequency bands 2500-2690 MHz for terrestrial systems capable of providing electronic communications services in the Community.

2008/432/EC - Decision of the Commission, May 23th, 2008, which amends Decision of the Commission 2006/771/EC regarding the harmonization of the radio frequency spectrum for its usage by short range equipments".

2008/411/EC - Decision of the Commission, May 21st, 2008, regarding the harmonization of frequency bands 3400-3800 MHz for terrestrial systems capable of providing electronic communications services in the Community.

2008/294/EC - Decision of the Commission, April 7th, 2008, regarding the harmonized conditions for usage of spectrum for operation of mobile communications services in aircraft (MCA services) in the Community.

2007/344/EC - Decision of the Commission, May 16th, 2007, regarding the harmonized availability of information about the usage of spectrum in the Community.

2007/131/EC - Decision of the Commission, February 21st, 2007, regarding the usage in harmonized conditions of the radio frequency spectrum for equipments that use ultra wide band technology in the Community.

2007/98/EC - Decision of the Commission, February 14th, 2007, regarding the harmonized usage of the radio spectrum in the frequency band 2 GHz for the implementation of MSS systems.

2007/90/EC - Decision of the Commission, February 12th, 2007, which amends the Decision of the Commission 2005/513/EC regarding the harmonized usage of the radio spectrum in the frequency band 5 GHz for the implementation of wireless access systems, including radio local networks (WAS/RLANs).

2006/804/EC - Decision of the Commission, November 23rd, 2006, regarding the spectrum harmonization for Radio Frequency Identification devices (RFID), which operate in the ultra-high frequency bands (UHF).

2006/771/EC - Decision of the Commission, November 9th, 2006, regarding the harmonization of the radio frequency spectrum for its usage by short range equipments.

2005/928/EC - Decision of the Commission, December 20th, 2005, regarding the harmonization of frequency bands 169.4-169.8125 MHz in the Community.

2005/513/EC - Decision of the Commission, July 11th, 2005, regarding the harmonized usage of the radio spectrum in the frequency band 5 GHz for the implementation of wireless access systems, including radio local networks (WAS/RLANs).

2005/50/EC - Decision of the Commission, January 17th, 2005, regarding the harmonization of frequency bands 24 GHz for temporary usage by short range radar equipments for cars in the Community.

2004/545/EC - Decision of the Commission, July 8th, 2005, regarding the harmonization of frequency bands 79 GHz for temporary usage by short range radar equipments for cars in the Community.

Directives

2009/114/EC - Directive from the European Parliament and Council, September 16th, 2009, which amends Directive 87/372/EEC of the Council about frequency bands to be allocated for the coordinated introduction of pan-European public cellular digital terrestrial mobile communications in the Community.

87/372/CEE - Directive from the Council regarding frequency bands to be allocated for the coordinated introduction of pan-European public cellular digital terrestrial mobile communications in the Community.

Recommendations

2010/167/EU - Recommendation of the Commission, March 19th, 2010, regarding the authorization of systems for the mobile communications systems on board vessels (MCV systems).

ITU Documents

Recommendations

Rec. UIT-R F0.385 -Plan for frequencies of fixed service systems in the band 7 GHz.

Rec. UIT-R F0.386 -Plan for frequencies for analogical and digital systems with medium and high capacity in the band 8 GHz.

Rec. UIT-R F.497 -Plan for frequencies of fixed service systems in the band 13 GHz.

Rec. UIT-R F0.595 -Plan for frequencies of fixed service systems in the band 18 GHz.

Rec. UIT-R F0.1110 - Adaptive systems for frequencies lower than 30 MHz.

7.5 Figures

a) Inductive applications

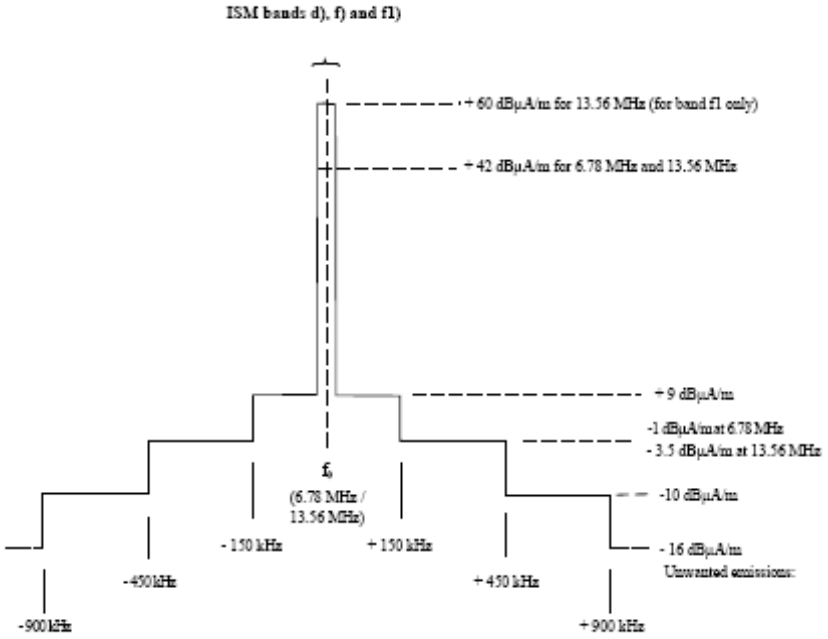

Figure 1 - Field intensity limits at 10 meters for frequency bands 6.765 - 6.795 MHz and 13.553 - 13.567 MHz

b) GMPCS mobile earth stations

Figure 2 - Marking on the GMPCS stations
